#### Joint EPS-SIF International School on Energy 2014

Course II - Energy: basic concepts and forefront ideas

17 - 23 July 2014 - VILLA MONASTERO - VARENNA, LAKE COMO

The importance of physics to the economies of Europe

Varenna, 17 July 2014

LUISA CIFARELLI
University & INFN, Bologna
CERN, Geneva
Centro Fermi, Rome

- The European Physical Society encompasses:
- **42 Member Societies** (DPG, IOP ... Cyprus)
- 40 Associate Member Institutions (CERN, DESY, ESRF, JINR, GSI, ESA... CEA, MPI, FOM, INFN... IHA, IIT, IPTI... CAEN, EDISON)
- MORE THAN 3500 INDIVIDUAL MEMBERS
- The EPS represents as a whole a community of OVER 10<sup>5</sup> PHYSICISTS (mostly from DPG & IOP)
- The EPS has bilateral agreements with:
- **22 COLLABORATING SOCIETIES** (APS, APPS ... EuCheMS)
- The EPS provides an INTERNATIONAL FORUM for physicists and acts as a FEDERATION of physical societies
- The EPS works to PROMOTE the interests of PHYSICISTS & PHYSICS in Europe and the world over
- The EPS headquarters are in Mulhouse, F → further secretariat in Brussels, B

#### Statements & Studies

EPS regularly issues Studies/Surveys and relative

POSITION STATEMENTS/PAPERS concerning not only the physicists' community but also the whole society, on topics such as:

EDUCATION — ENERGY — CLIMATE

ENVIRONMENT — GENDER — CAREERS

COMMUNICATION — TECHNOLOGY TRANSFER

RESEARCH — ECONOMY — ASSESSMENT ...

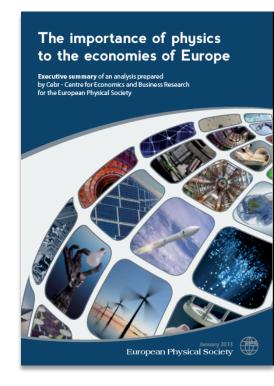

#### **Statements & Studies**

Report commissioned by EPS in 2012 to an independent business & economics corporation (Cebr) on the importance of physics in the economies of EU27 countries (plus Norway and Switzerland, non-EU EFTA) over 2007-2010

#### FOR THE FIRST TIME!

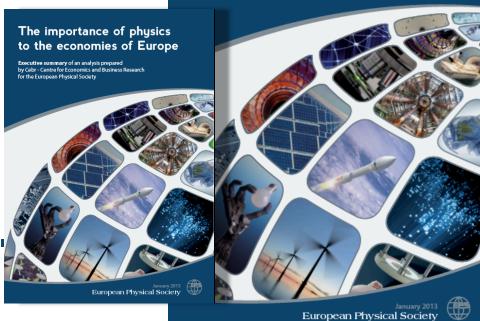

- Completed in December 2012 and printed beginning of 2013
- Plan settled for its timely distribution & presentation in various relevant European councils and meetings:
  - EPS Council, Strasbourg, France, 5 April 2013
  - CERN Council, Geneva, Switzerland, 21 June 2013
  - JINR Scientific Council, Dubna, Russia, 19 September 2013
  - SIF Round Table on Technology Transfer, Trieste, Italy, 24 September 2013
  - OECD Global Science Forum on Knowledge Economy, Istanbul, Turkey, 21
     October 2013
  - etc.

#### (inspired by IOP)

# The importance of physics to the economies of Europe

#### **TARGET AUDIENCE**

- ✓ EU policy makers
- ✓ European Parliament
- ✓ European Institutions (EC, ERA ...)
- EUROPEAN RESEARCH AREA
- ✓ National/global policy makers
- ✓ EPS Member Societies → trigger studies at national level
- ✓ EPS Associate Members (scientific/academic institutions, but also enterprises, corporations & industries)

### Purpose of the Report

- Explain to policy makers that:
  - physics makes an important contribution to the economy and is not simply limited to academic research
  - funding scientific research and education is an investment for the future, not only for the economy but for many diverse areas of technological development (health, energy, communication and so on)
    - → steady progress and long lasting welfare
- Provide to the physics community a powerful tool to show that physics counts ...

#### Physics evaluation procedure

- Perform a quantitative and as much as possible objective & unbiased statistical analysis of the contribution of physics to the business economy
- Use an independent consultancy firm, specialised in the treatment of business data (Cebr — Centre for Economics & Business Research, London, UK)
- Use public domain data
- Make an appropriate definition of the contour of the study taking into account all physics sectors (not only particle physics!)

#### Data sources

- Use EU Eurostat's Structural Business Statistics (SBS) based on data (supply-and-use & input-output tables) provided by enterprises and categorized under NACE classification
- Use, in particular, Human Resourses in Science and Technology (HRST) employment statistics of Eurostat
- Use the NACE classification scheme (Nomenclature Générale des Activités Economiques dans les Communautés Européennes), the EU framework to classify the different economic activities
- Use NACE Rev. 2 with 65 broad industry categories in the 'whole economy', out of which 49 are covered by the SBS database in the 'business economy'
- Use also other information from bodies such as World Trade Organisation, United Nations, US Census Bureau, Japan Customs ...

#### Physics-based industries & activities

- Physics-based industries are defined as industries where the use of physics – in terms of technologies, expertise and innovation – is critical to their existence
- The physics-based activities considered in this Report include to <u>varying degrees</u> the sectors of:
  - Electrical, civil, & mechanical engineering
  - Energy
  - Information technology & communications
  - Design & manufacturing
  - Transportation
  - Medicine & related life-science fields
  - Technologies used in space

# NACE Rev. 2 Definition of physics-based activities Subset of 77 codes out of a total of over 700

Code	Description	Code	Description
6.1	Extraction of crude petroleum	27.51	Manufacture of electric domestic appliances
6.2	Extraction of natural gas	27.9	Manufacture of other electrical equipment
9.1	Support activities for petroleum and natural gas extraction	28.11	Manufacture of engines and turbines, except aircraft, vehicle and cycle engines
20.13	Manufacture of other inorganic basic chemicals	28.21	Manufacture of ovens, furnaces and furnace burners
21.2	Manufacture of pharmaceutical preparations	28.23	Manufacture of office machinery and equipment (except computers and peripheral equipment)
23.44	Manufacture of other technical ceramic products	28.25	Manufacture of non-domestic cooling and ventilation equipment
24.46	Processing of nuclear fuel	28.29	Manufacture of other general-purpose machinery n.e.c.
25.21	Manufacture of central heating radiators and boilers	28.49	Manufacture of other machine tools
25.3	Manufacture of steam generators, except central heating hot water boilers	28.92	Manufacture of machinery for mining, quarrying and construction
25.4	Manufacture of weapons and ammunition	28.99	Manufacture of other special-purpose machinery n.e.c.
25.99	Manufacture of other fabricated metal products n.e.c.	29.1	Manufacture of motor vehicles
26.11	Manufacture of electronic components	29.31	Manufacture of electrical and electronic equipment for motor vehicles
26.12	Manufacture of loaded electronic boards	30.11	Building of ships and floating structures

### Physics-based industries & activities

 Depending on the particular datasets analysed in different parts of this Report, the size and importance of physics-based industries to the wider European economy were estimated using different comparators:

'business economy' & 'whole economy'

- 'Whole economy' represents a larger comparator than the 'business economy' which does not include, for example, agriculture, financial, public administration and other nonmarket services
- Physics-based activities which are not included within the NACE codes are largely non-market services & activities
  - → For example education and health, sports and entertainment are omitted, as well as national and European/international physics research facilities, including CERN

### Cebr Full Report

#### The importance of physics to the economies of Europe

A study to determine the importance of physics to the EU27 and constituent national economies through the analysis of the economic impact and structure of physics-based industry and output

(59 pages)

#### Report for the European Physical Society

#### Results in brief

# €3.8 trillion

In 2010, physics-based industries generated €3.8 trillion of turnover, representing over 15% of total turnover within Europe's business economy. Turnover per person employed in the physics-based sector substantially outperforms the construction and retail sectors.

### €47 billion

The European physics-based sector is highly R&D intensive. Physics-based sector expenditure on R&D exceeded €47 billion every year over the period 2007-2010. R&D investment levels in 2010 exceeded those in 2007.

### AT A GLANCE

### 15.4 million

In 2010, physics- based industries employed 15.4 million people. This is over 13% of total employment within Europe's business economy. Moreover, for every job created in physics-based industries, a total of 2.73 jobs are supported in the whole economy by these industries.

44.9%

Gross Value Added (GVA) measures the value produced by a sector of the economy. Physics-based GVA is diverse.

44.9% comes from manufacturing, but more than 50% is spread between information & communication, professional, scientific & technical activities, oil & gas activities, and energy production.

### Contribution to total EU GVA (Gross Value Added, analogous of GDP at global level)

#### **GVA**

GVA (Gross Value Added) is a measure of the value <u>from</u> <u>production</u> in the national accounts and can be thought of as:

(value of industrial output, i.e. <u>turnover</u> – intermediate consumption) *i.e.* 

(value of what is produced – value of intermediate goods and services used as inputs to produce it)

GVA is also commonly known as income from production and is distributed in three directions: i) to employees, ii) to investors and iii) to government

GVA is linked as a measurement to GDP – both being a measure of economic output:

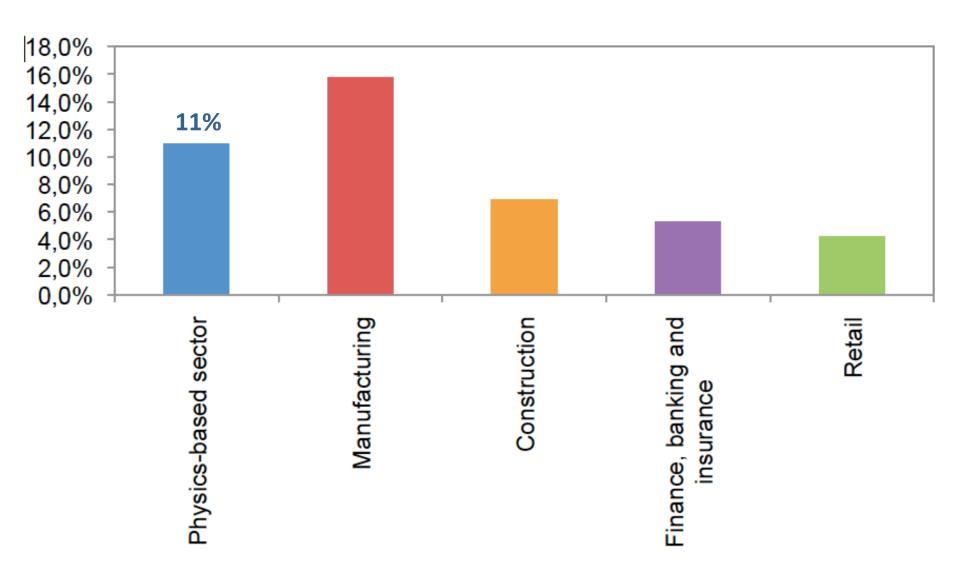

```
(GVA + taxes on products – subsidies on products = GDP)
```

#### Results in brief

## €3.8 trillion

In 2010, physics-based industries generated €3.8 trillion of turnover, representing over 15% of total turnover within Europe's business economy. Turnover per person employed in the physics-based sector substantially outperforms the construction and retail sectors.

### €47 billion

The European physics-based sector is highly R&D intensive. Physics-based sector expenditure on R&D exceeded €47 billion every year over the period 2007-2010. R&D investment levels in 2010 exceeded those in 2007.

### AT A GLANCE

### 15.4 million

In 2010, physics- based industries employed 15.4 million people. This is over 13% of total employment within Europe's business economy. Moreover, for every job created in physics-based industries, a total of 2.73 jobs are supported in the whole economy by these industries.

44.9%

Gross Value Added (GVA) measures the value produced by a sector of the economy. Physics-based GVA is diverse.

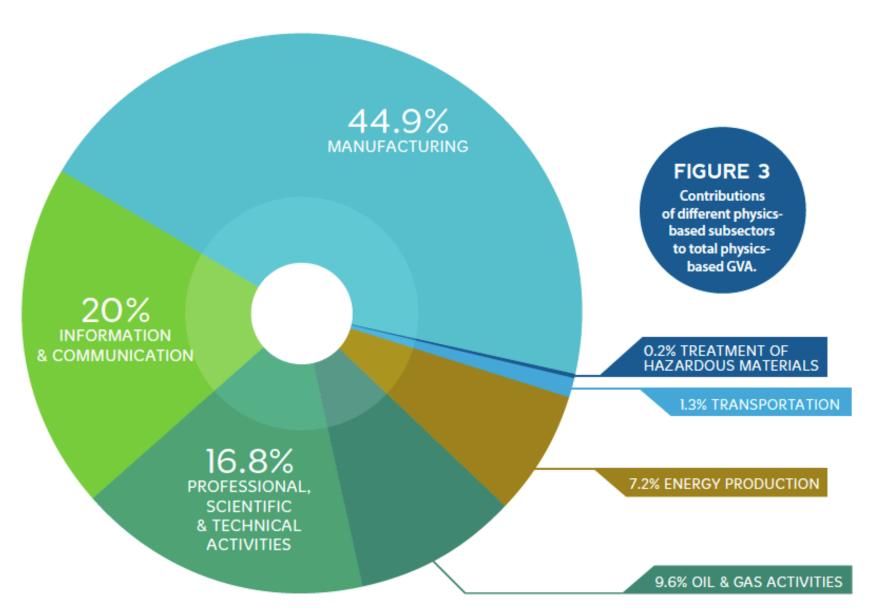

44.9% comes from manufacturing, but more than 50% is spread between information & communication, professional, scientific & technical activities, oil & gas activities, and energy production.

### 44.9%

44.9% comes from manufacturing, but more than 50% is spread between information & communication, professional, scientific & technical activities, oil & gas activities, and energy production

# Contribution of physics-based subsectors to total physics-based GVA

## Physics-based goods & services contributions to exports

### Message

- ✓ Europe has a long lasting tradition in physics, science and technology (CERN is an outstanding example – of course not only CERN!)
- ✓ The Cebr Report commissioned by the EPS clearly highlights
  the importance of physics to the European economy
- ✓ Our hope is that the message conveyed by the EPS through this Report will be inspiring for the future, both at the European and national levels, and make a convincing case for the support of physics in all of its facets:
  - from education to research, to business and industry —

#### The Impacts of Large Research Infrastructures on Economic Innovation and on Society

CASE STUDIES AT CERN

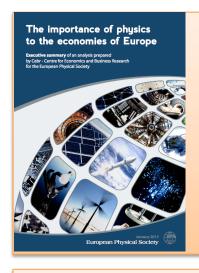

Report commissioned by CERN to OECD Global Science Forum in 2012

Approved by OECD Committee for Scientific & Technological Policy in June 2014

#### ITALIAN PHYSICAL SOCIETY Società Italiana di Fisica

La Società Italiana di Fisica (SIF), fondata nel 1897, è un'associazione non-profit che ha lo scopo di promuovere, favorire e tutelare lo studio e il progresso della Fisica in Italia e all'estero.

La SIF rappresenta la comunità scientifica italiana, dal mondo della ricerca e dell'insegnamento a quello professionale, in tutti campi della Fisica e in tutti i settori applicativi: Medicina, Biologia, Informatica, Economia e Finanza, Meteorologia e Climatologia, Ambiente, Archeometria, Beni Culturali.

# La SIF conta più di 3000 Soci, promuove e organizza sui temi più sentiti dalla comunità dei fisici Ricerca, Professione, Legislazione, Didattica, Università varie attività:

- \* Scuola Internazionale E. Fermi
  - \* Editoria
  - \* Energia
  - \* Fisica ed Economia
    - Professione Fisico
  - \* Piano Lauree Scientifiche
    - \* Gender
- \* Commissione Didattica Permanente

# NACE Rev. 2 Definition of physics-based sector (PBS) activities Subset of 78 codes out of a total of over 700

DIRECT PHYSICS-BASED EMPLOYMENT BY NACE 4-DIGIT INDUSTRY, ITALY, 2011 (% Attributable refers to proportion of all sector activity counted as physics-based)

NACE Code	% Attributable	Direct Physics-based Employment	based NACE Code		Direct Physics-base Employment
0910 : Support activities for petroleum and natural gas extraction		8,100	2841 : Manufacture of metal forming machinery	100%	
2011 : Manufacture of industrial gases	2%	100	2849 : Manufacture of other machine tools	100%	21,500
2013 : Manufacture of other inorganic basic chemicals	100%	6,000	2892 : Manufacture of machinery for mining, quarrying and construction		21,700
2059 : Manufacture of other chemical products n.e.c.	2%	300	2899 : Manufacture of other special-purpose machinery n.e.c.		21,700
2110 : Manufacture of basic pharmaceutical products	1%	100	2910 : Manufacture of motor vehicles	47%	30,000
2120 : Manufacture of pharmaceutical preparations	100%	51,000	2931 : Manufacture of electrical and electronic equipment for motor vehicles	100%	11,200
2229 : Manufacture of other plastic products	2%	1,800	3011 : Building of ships and floating structures	100%	16,200
2319 : Manufacture and processing of other glass, including technical glassware	2%	200	3020 : Manufacture of railway locomotives and rolling stock	100%	10,400
2344 : Manufacture of other technical ceramic products	100%	500	3030 : Manufacture of air and spacecraft and related machinery	100%	31,900
2452 : Casting of steel	8%	200	3040 : Manufacture of military fighting vehicles	100%	1,300
2521 : Manufacture of central heating radiators and boilers	100%	4,200	3250 : Manufacture of medical and dental instruments and supplies	100%	61,800
2530 : Manufacture of steam generators, except central heating hot water boilers	100%	2,700	3299 : Other manufacturing n.e.c.	25%	4,500
2540 : Manufacture of weapons and ammunition	100%	7,000	3320 : Installation of industrial machinery and equipment	100%	52,700
2561 : Treatment and coating of metals	2%	700	3511 : Production of electricity	100%	25,200
2593 : Manufacture of wire products, chain and springs	2%	200	3512 : Transmission of electricity	100%	3,500
2599 : Manufacture of other fabricated metal products n.e.c.	100%	79,300	3513 : Distribution of electricity	100%	23,600
2611 : Manufacture of electronic components	100%	29,200	3514 : Trade of electricity		700
2612 : Manufacture of loaded electronic boards	100%	9,000	3812 : Collection of hazardous waste		2,600
2620 : Manufacture of computers and peripheral equipment	100%	6,800	3822 : Treatment and disposal of hazardous waste		3,000
2630 : Manufacture of communication equipment	100%	26,800	4222 : Construction of utility projects for electricity and telecommunications		200
2640 : Manufacture of consumer electronics	100%	2,500	4321 : Electrical installation		54,800
2651 : Manufacture of instruments and appliances for measuring, testing and navigation	100%	22,400	4322 : Plumbing, heat and air-conditioning installation		37,200
2660 : Manufacture of irradiation, electromedical and electrotherapeutic equipment	100%	12,700	5221 : Service activities incidental to land transportation		8,800
2670 : Manufacture of optical instruments and photographic equipment	100%	2,100	5222 : Service activities incidental to water transportation		12,200
2680 : Manufacture of magnetic and optical media	100%	100	5223 : Service activities incidental to air transportation		26,900
2711 : Manufacture of electric motors, generators and transformers	100%	29,700	6110 : Wired telecommunications activities		60,000
2712 : Manufacture of electricity distribution and control apparatus	100%	23,900	6120 : Wireless telecommunications activities		22,100
2720 : Manufacture of batteries and accumulators	100%	2,900	6130 : Satellite telecommunications activities	10%	
2731 : Manufacture of fibre optic cables	100%	1,300	6190 : Other telecommunications activities	2%	300
2732 : Manufacture of other electronic and electric wires and cables	100%	11,000	6209 : Other information technology and computer service activities	2%	500
2733 : Manufacture of wiring devices	100%	6,600	7022 : Business and other management consultancy activities	10%	9,600
2740 : Manufacture of electric lighting equipment	100%	17,100	7111 : Architectural activities	6%	4,500
2751 : Manufacture of electric domestic appliances	100%	38,400	7112 : Engineering activities and related technical consultancy	42%	81,900
2790 : Manufacture of other electrical equipment	100%	34,600	7120 : Technical testing and analysis	32%	10,400
2811 : Manufacture of engines and turbines, except aircraft, vehicle and cycle engines	100%	17,300	7211 : Research and experimental development on biotechnology	100%	3,100
2821 : Manufacture of ovens, furnaces and furnace burners	100%	12,000	7219 : Other research and experimental development on natural sciences and engineering	100%	17,000
2823 : Manufacture of office machinery and equipment (except computers and peripheral equipment)	100%	2,100	7420 : Photographic activities	10%	1,900
2825 : Manufacture of non-domestic cooling and ventilation equipment	100%	31,300	7490 : Other professional, scientific and technical activities n.e.c.	100%	112,900
2829 : Manufacture of other general-purpose machinery n.e.c.	100%	72,400	8422 : Defence activities	33%	106,400

#### THE QUANTIFIABLE IMPACTS OF PHYSICS-BASED SECTORS IN ITALY, 2011: 60-SECOND SUMMARY

The direct physics-based sector is a major contributor to the Italian economy ...

1.51 million total jobs in 2011

6.1% Italian employment in 2011

€118 billion **GVA** contribution in 2011

7.4% Italian GDP in 2011

... productivity levels are high ...

€ 78.100 GVA

per worker in

physics-based

sectors in 2011

22% higher than the all-sector average in Italy in 2011

... and have increased since 2008 ...

2.5% real increase in GVA per worker in physics-based sectors from 2008 to 2011

**▼ −1.5%** the equivalent contraction in all-sector GVA per worker in Italy from 2008 to 2011

... but employement has suffered badly ...

114,000 net jobs lost in physics-based sectors from 2008 to 2011

-7% variation from 2008 to 2011 (all economy -2% by comparison)

Physics-based direct GVA contribution is spread across a range of Italian industries in 2011 ...

49% in manufacturing

22% in transport & communications

8% in business services (inc. R&D)

... with extra impacts in many more industries from the physics-based supply chain and consumer spending

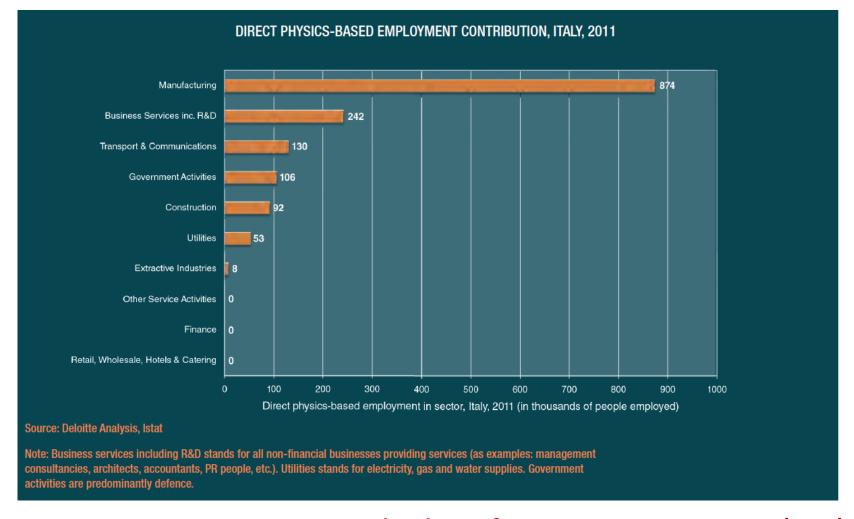

340,000 jobs in other services

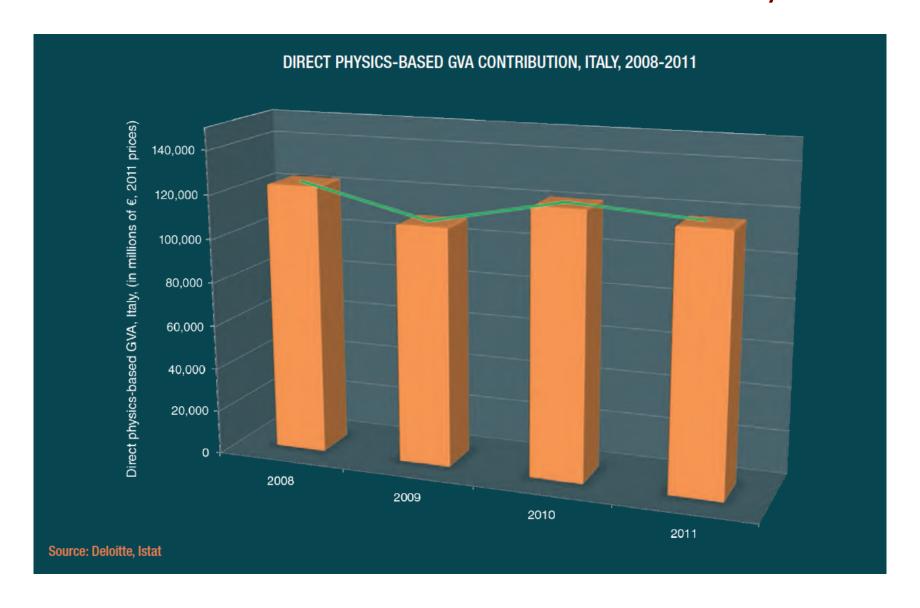

90,000 jobs in finance

# Direct physics-based sector (PBS) employment 1.51 million jobs in 2011 → 6.1% of total in Italy Manufacturing: 58% of all PBS jobs

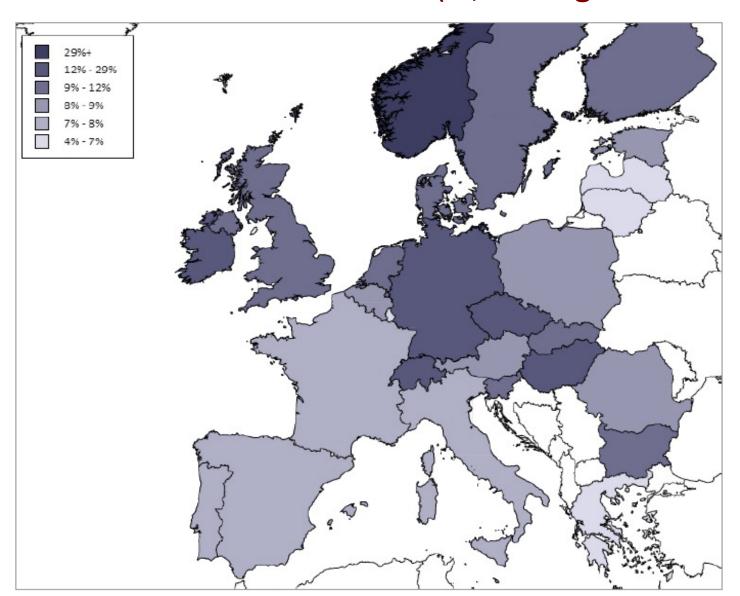

PBS jobs lost from 2008 to 2011 (7%) mostly in Manufacturing

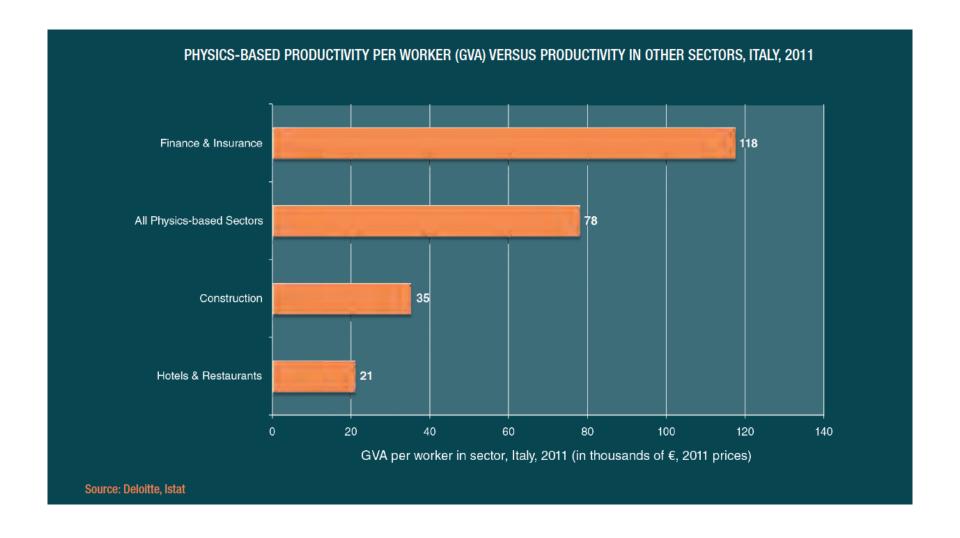

## Direct physics-based sector (PBS) accounted for €118 billion of GVA in 2011 → 7.4% of Italy's GDP

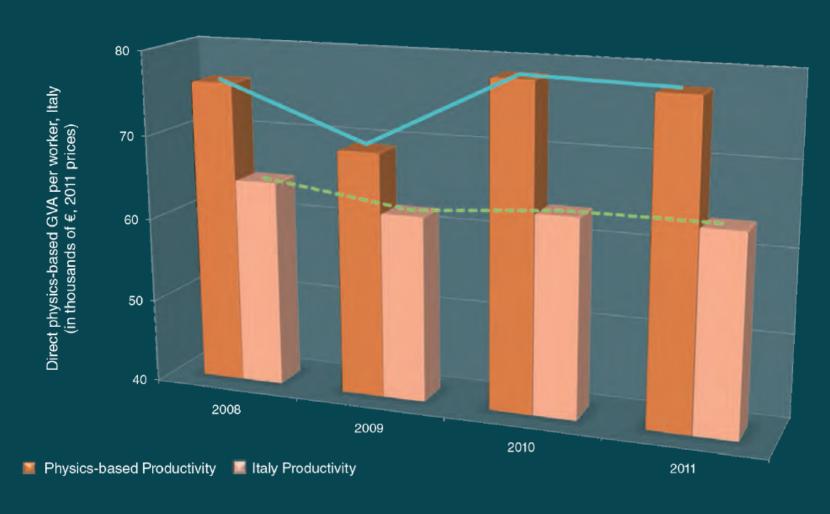

Physics-based GVA as a proportion of GDP in the EU27, Norway & Switzerland (%, average 2007-2010)

### Physics-based sector (PBS) productivity (GVA/worker) €78,100 in 2011 → 22% higher than all-sector productivity in Italy

#### DIRECT PHYSICS-BASED PRODUCTIVITY PER WORKER (GVA), ITALY, 2008-2011

## Physics-based sector (PBS) activity concentrated in Northern Italy

PHYSICS-BASED SECTORS CONTRIBUTION ACROSS ITALIAN REGIONS, 2011

	All Economy		Physics-based Sectors						
Region	GVA (at production factor cost, in billions of €)	Number of people employed	GVA (at production factor cost, in billions of €)	Number of people employed	Relative productivity	% Regional GVA	% Regional employment		
North	457.8	9,513,000	67.5	929,000	96	14.7	9.8		
Central	149.4	3,376,000	21.7	261,000	110	14.5	7.7		
South	130.1	3,729,000	16.8	216,000	103	12.9	5.8		
Italy	737.3	16,618,000	105.9	1,406,000	100	14.4	8.5		

Source: Deloitte, Istat

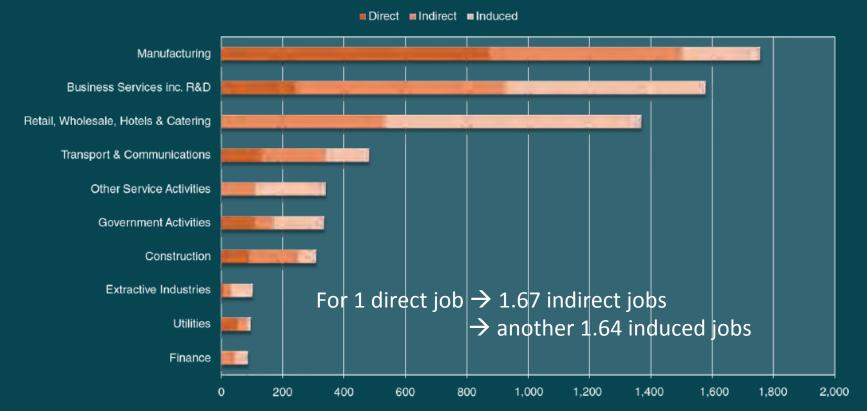

Note: Here the quoted GVA figures are lower than elsewhere in this study because of: a) the use of production factor cost instead of market price; b) missing regional data for both physics-based and non-physics-based sectors (predominatly in defence and finance).

Productivity (GVA/worker) higher in Central & Southern Italy due to a concentration of capital intensive activities: extractive industries, utilities (electricity, gas, water supply) + manufactures of computer, electronic & optical products

### Physics-based sector (PBS) footprint in 2011 6.5 million jobs → 25% of total

Aggregated contribution: direct + indirect (business-to-business supply-chain spending) + induced (consumer spending)

#### TOTAL PHYSICS-BASED EMPLOYMENT CONTRIBUTION, ITALY, 2011

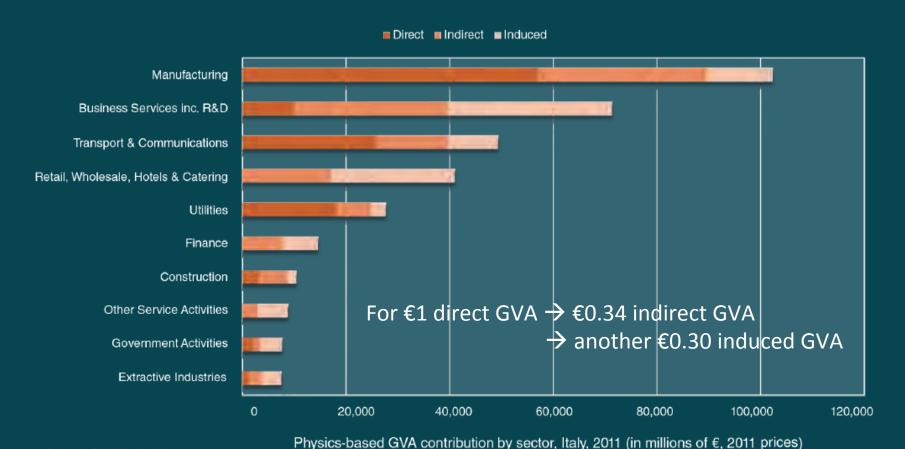

Physics-based employment contribution by sector, Italy, 2011 (in thousands of people employed)

Source: Deloitte, Istat

### Physics-based sector (PBS) footprint in 2011 €341 billion of GVA → 22% of total GDP

Aggregated contribution: direct + indirect (business-to-business supplychain spending) + induced (consumer spending)

#### TOTAL PHYSICS-BASED GVA CONTRIBUTION, ITALY, 2011

Source: Deloitte, Istat

## Physics-based sector (PBS) exports in 2008-2011 €130 billion → 35% of all Italian physical goods exports

Source: Deloitte, Istat

Note: Only physics-based sectors where that data exists are included. Current prices (non-inflation adjusted) are considered due to issues with deflating imports and exports at a disaggregate level.

### Conclusion

- ✓ The Deloitte Report commissioned by the SIF clearly highlights the importance of physics to the Italian economy especially on metrics such as productivity
- ✓ Our hope is that the message conveyed by the SIF through this Report will be inspiring for the future, both at the European and national levels
- ✓ Investing in physics today in Italy is the right thing to do
  - through education, research, business and industry
