

# Bioenergy: potentials. limitations

EPS-Summer School  
July 17 to 23, 2014

E D Schulze

MPI Biogeochemie, Jena

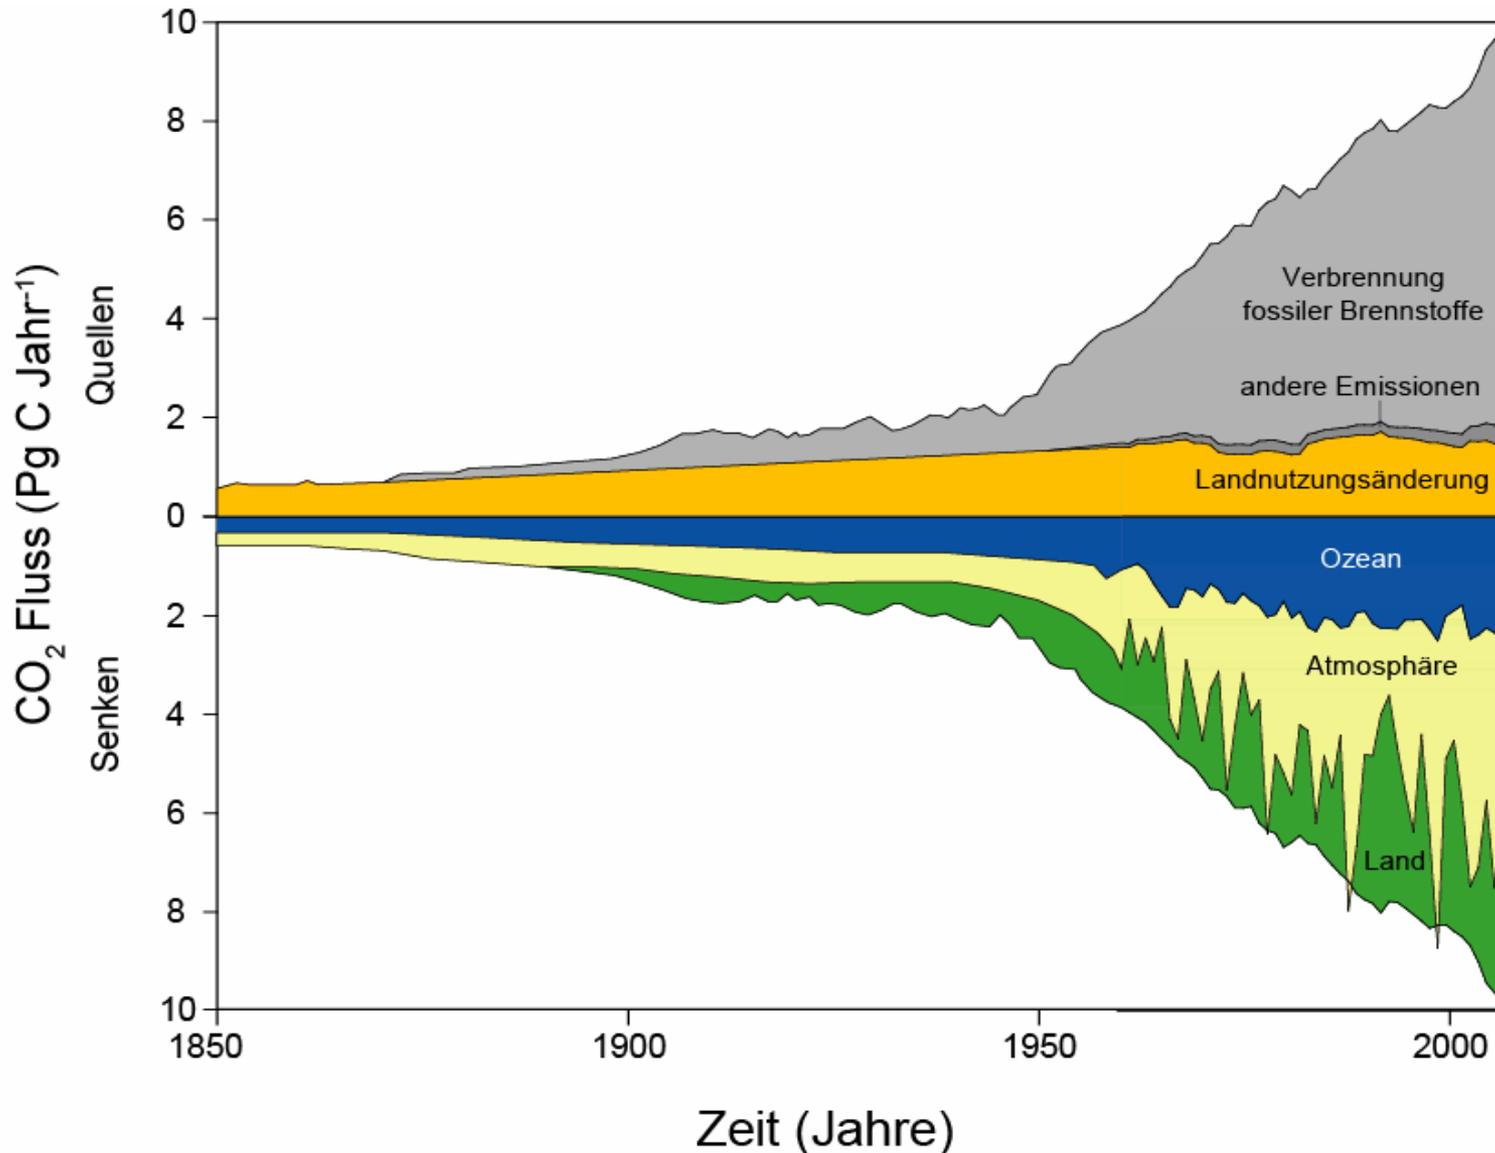

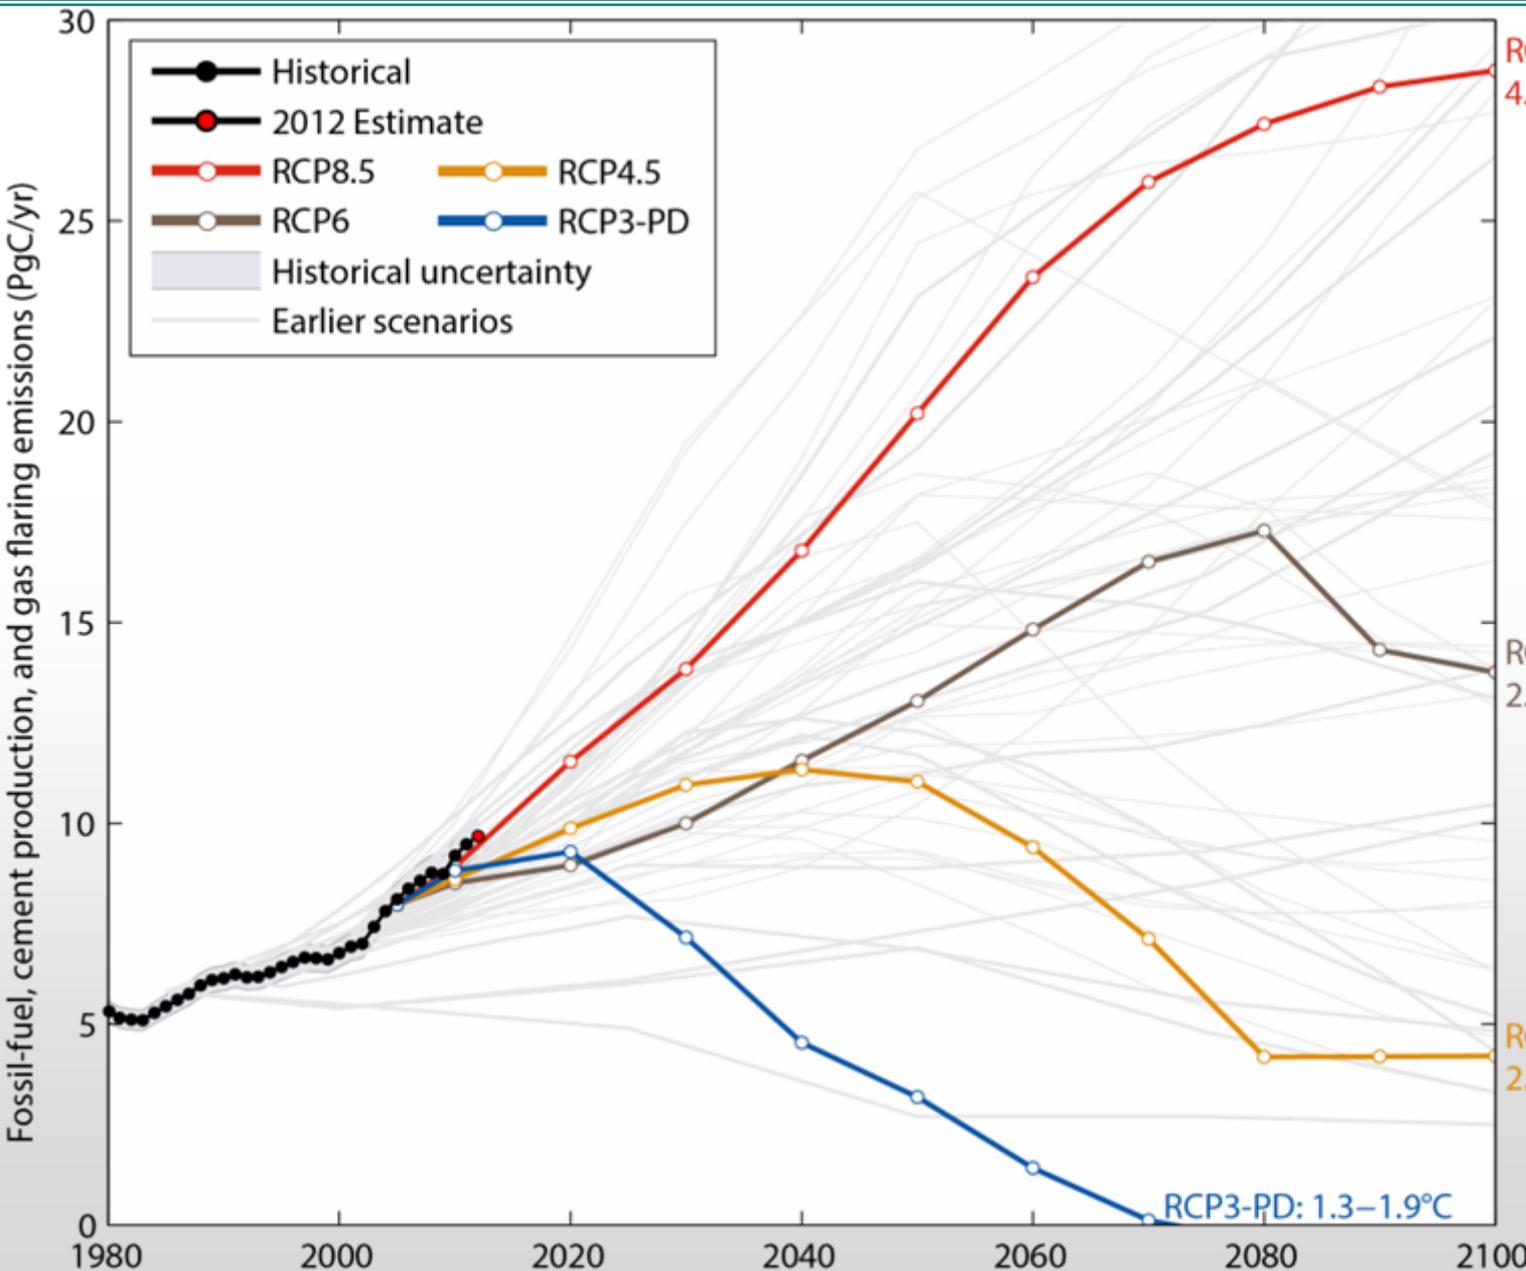

**Color chart Ib** (cf. page 176): Global distribution of radiation use efficiency of the vegetation. Energy efficiency, i.e. energy content of net primary production, is expressed as percentage of the global annual photosynthetically active radiation. (After Uchijima and Seino 1987)

**Global change =  $\Delta$  climate +  $\Delta$  Land-use**

**Additional changes in Industry, commerce, and trade**

RCP8.5  
4.0–6.1°C

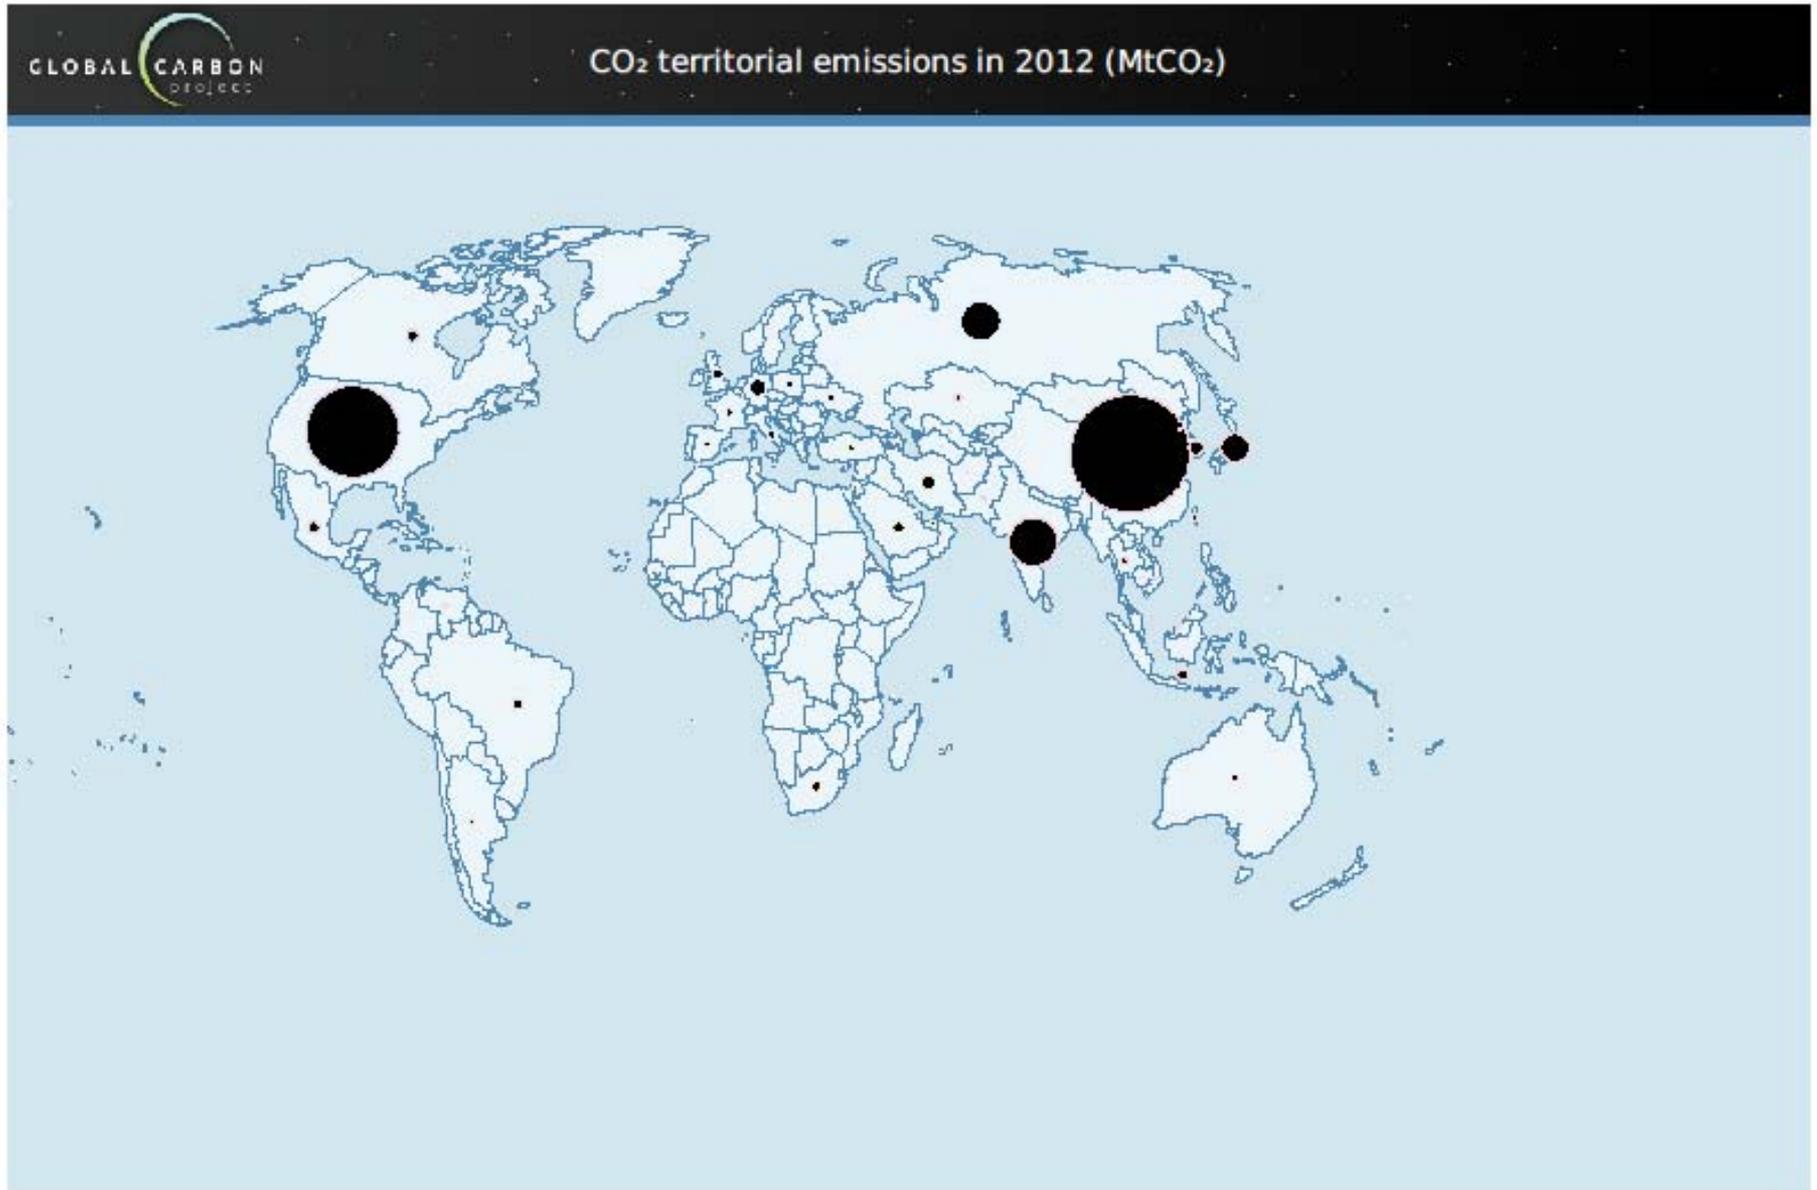

RCP6  
2.6–3.7°C

RCP4.5  
2.0–3.0°C

RCP3-PD: 1.3–1.9°C

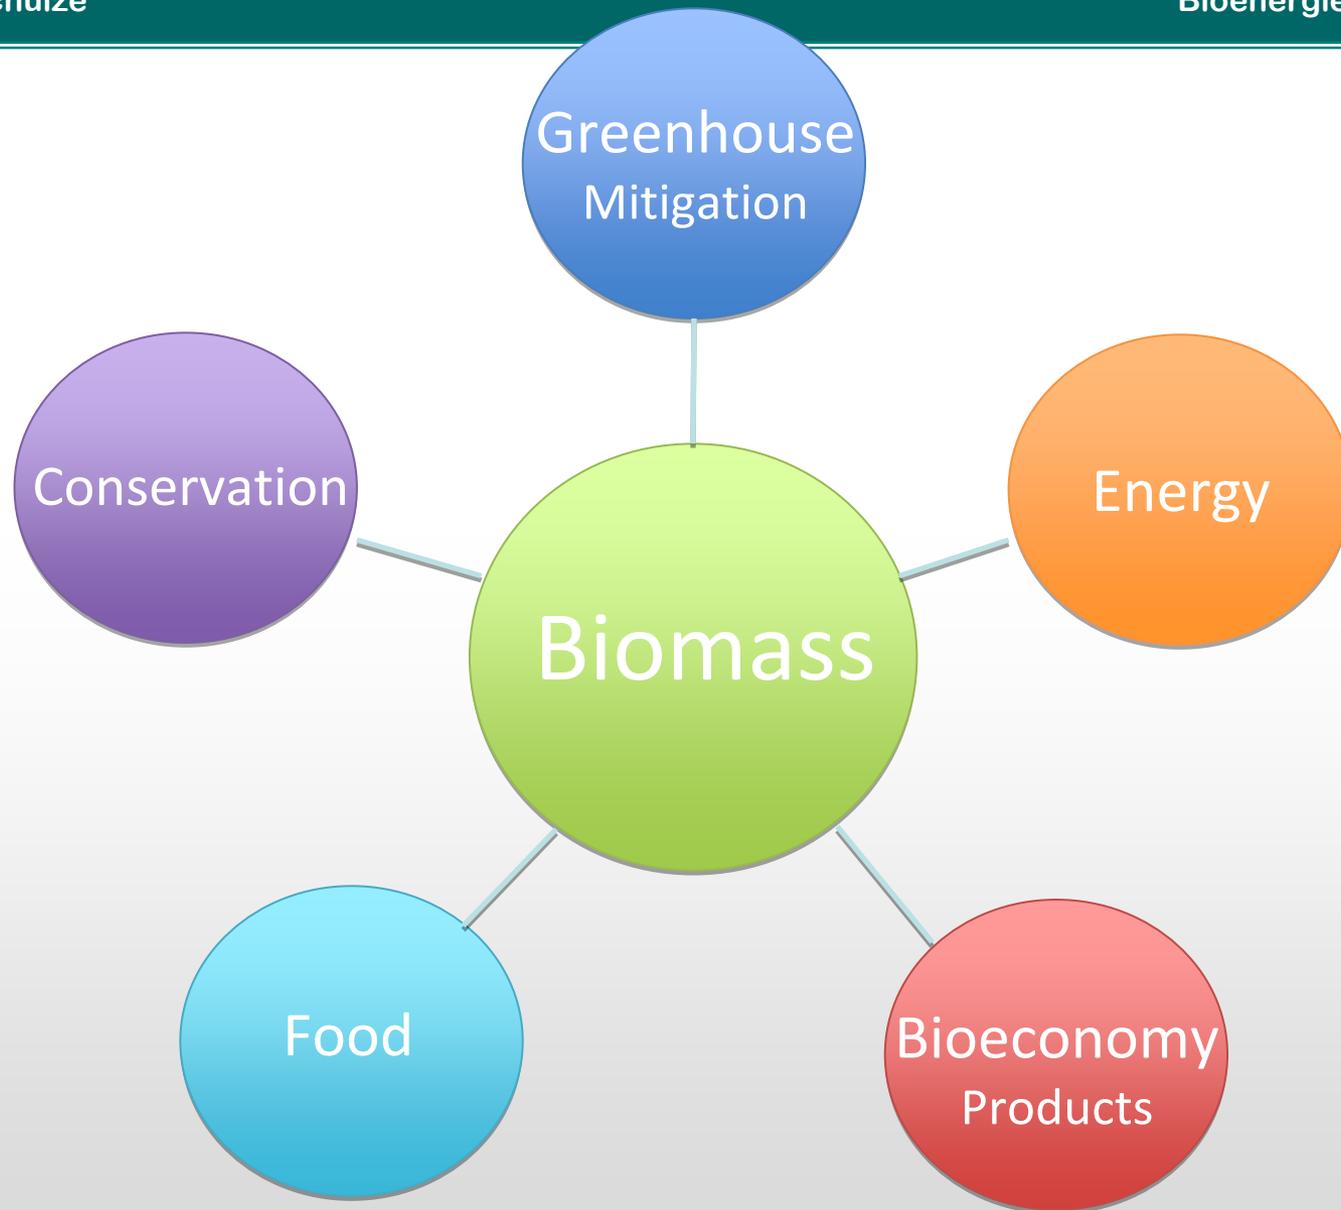

RCP=  
Representative  
Concentration  
Pathways

Global Carbon  
Project, 2012

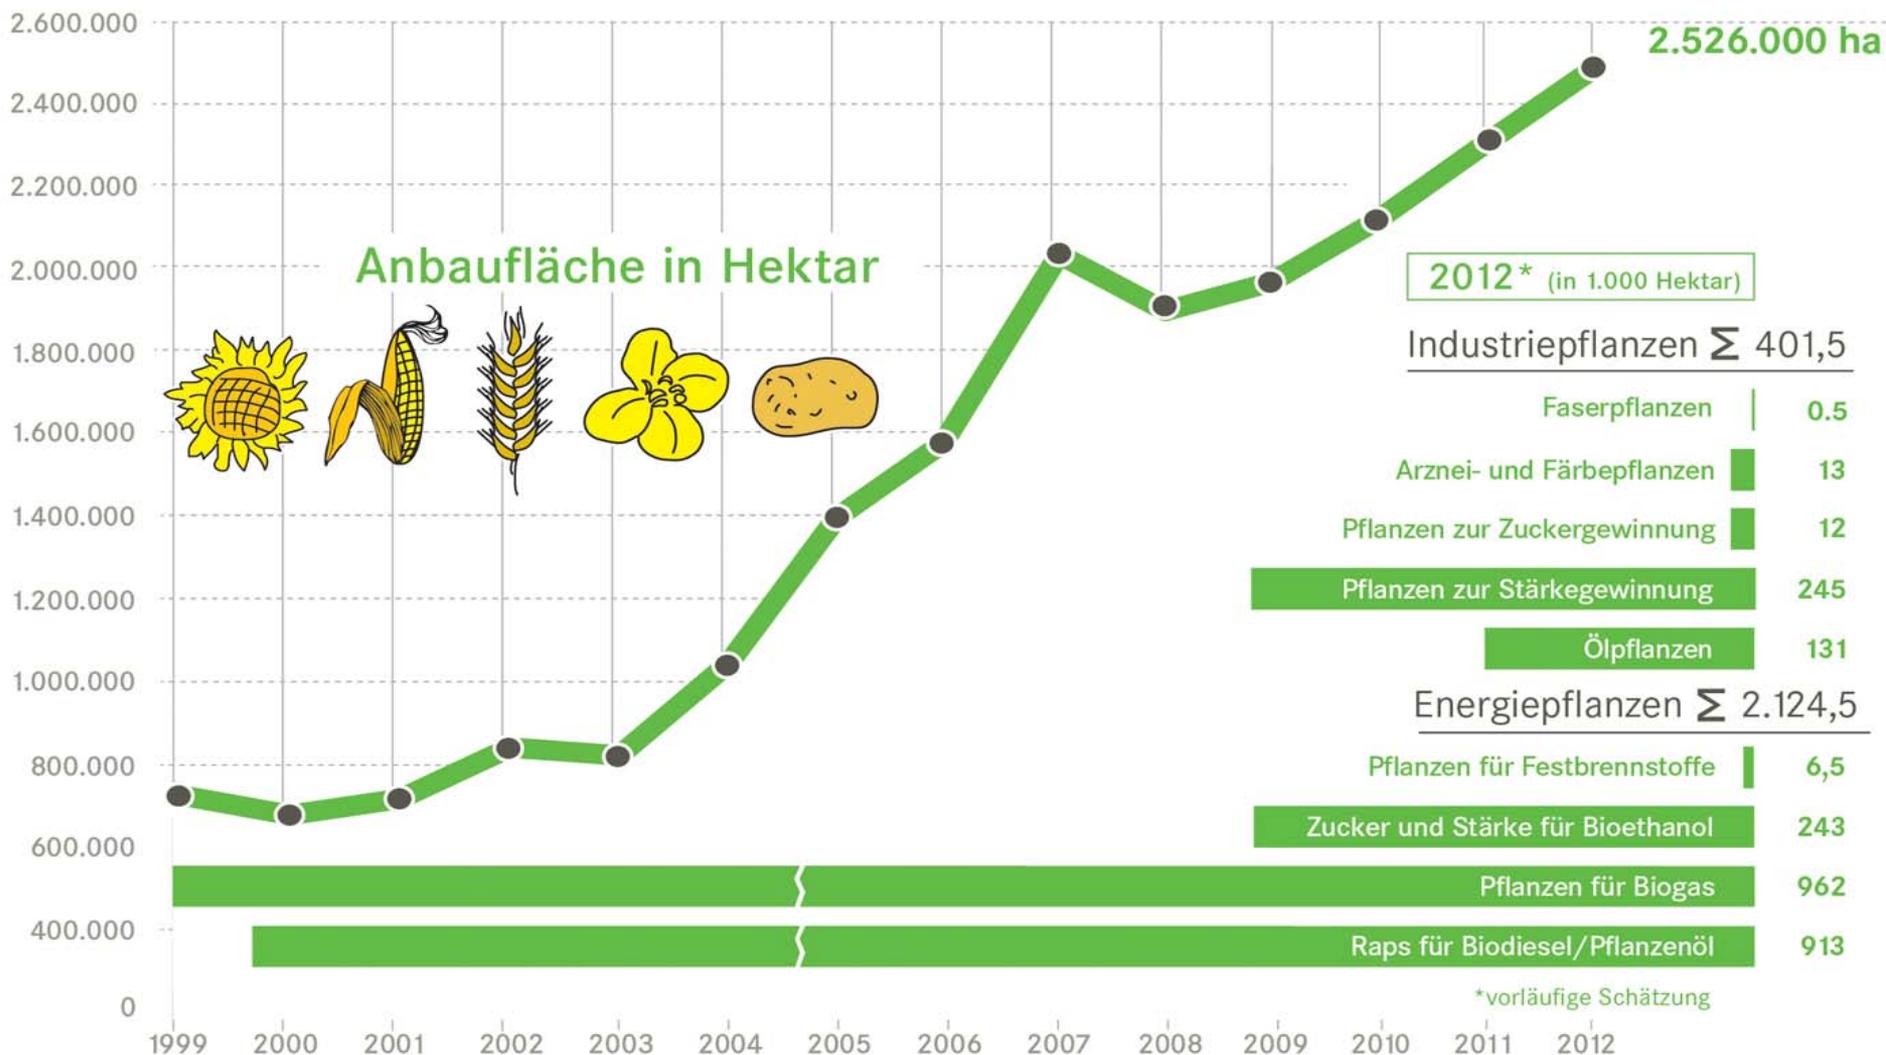

## **Focus on Bioenergy**

- What can bioenergy do?**
- The greenhouse gas balance of Europe**
- The situation in forestry**
- The situation in agriculture**
- Global commerce**
- conclusions**

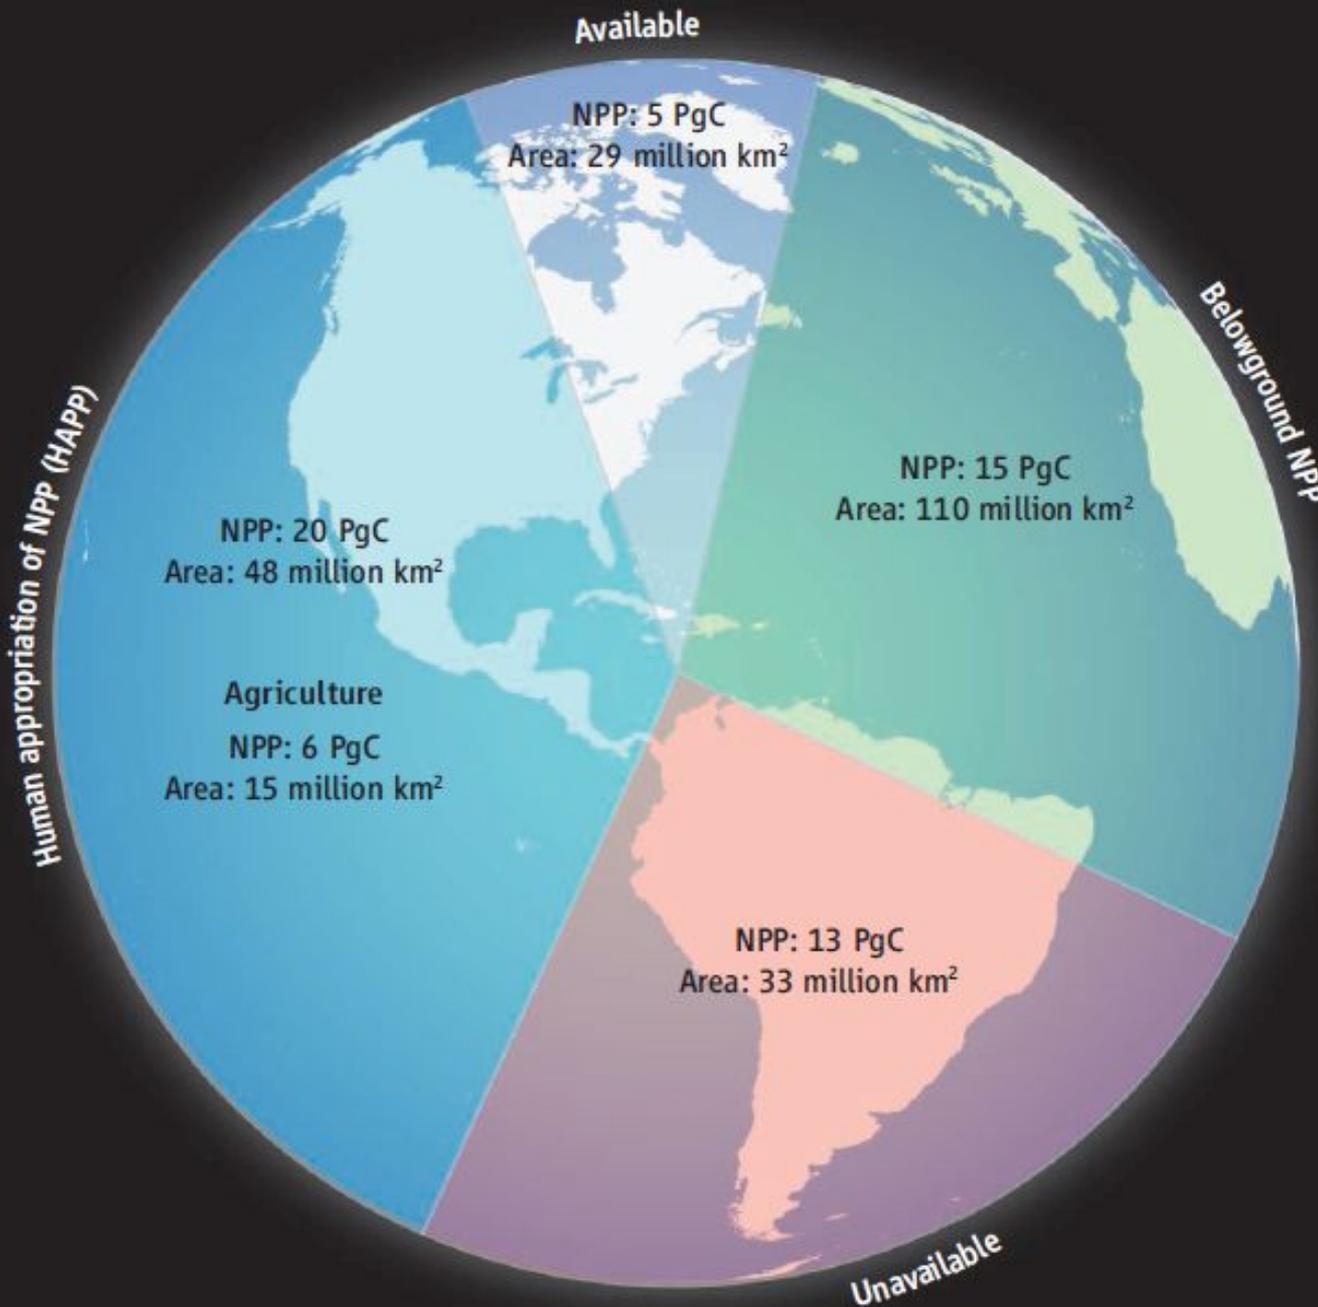

# ANBAU NACHWACHSENDEDER ROHSTOFFE IN DEUTSCHLAND

Quelle: FNR

**Zusätzlich zu allen bestehenden Problemen kam die Energiewende:  
Eine Verdopplung der Anbaufläche ist geplant**

Running, S.  
Science  
337:1458-1459

Globale NPP:  
60 PgC

Human use:  
26 Pg (44%)

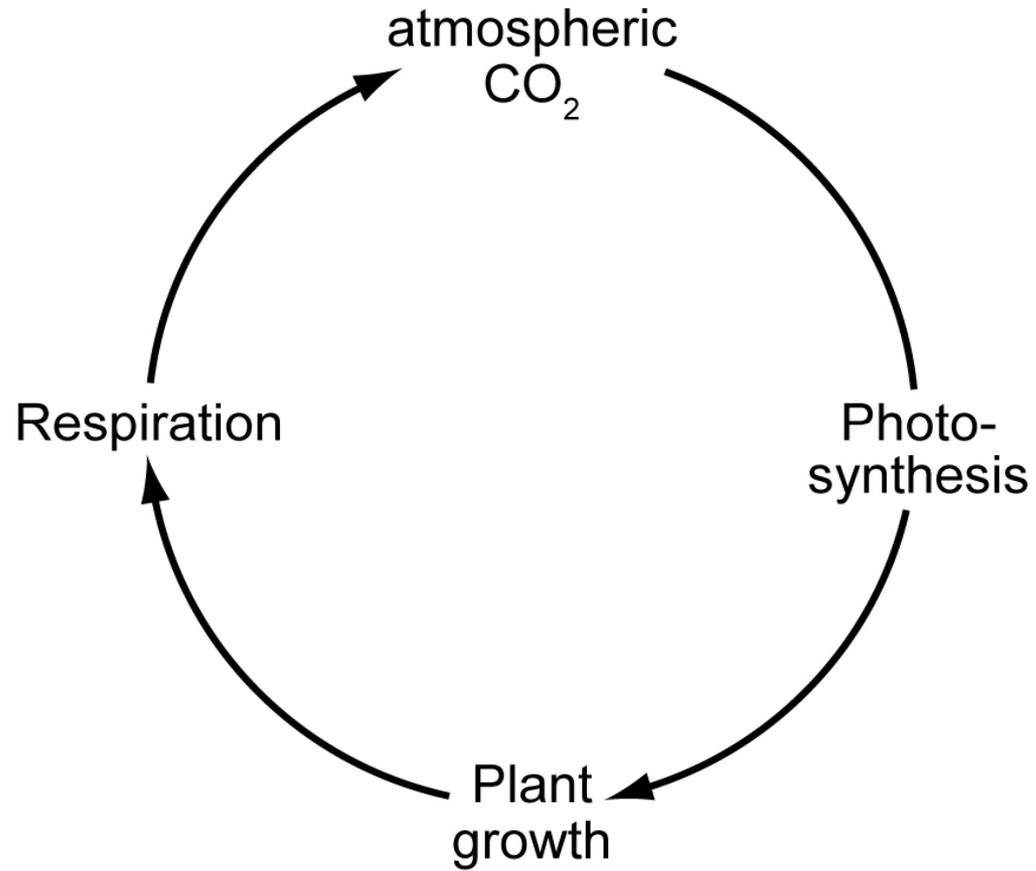

Germany:  
59% of NPP used

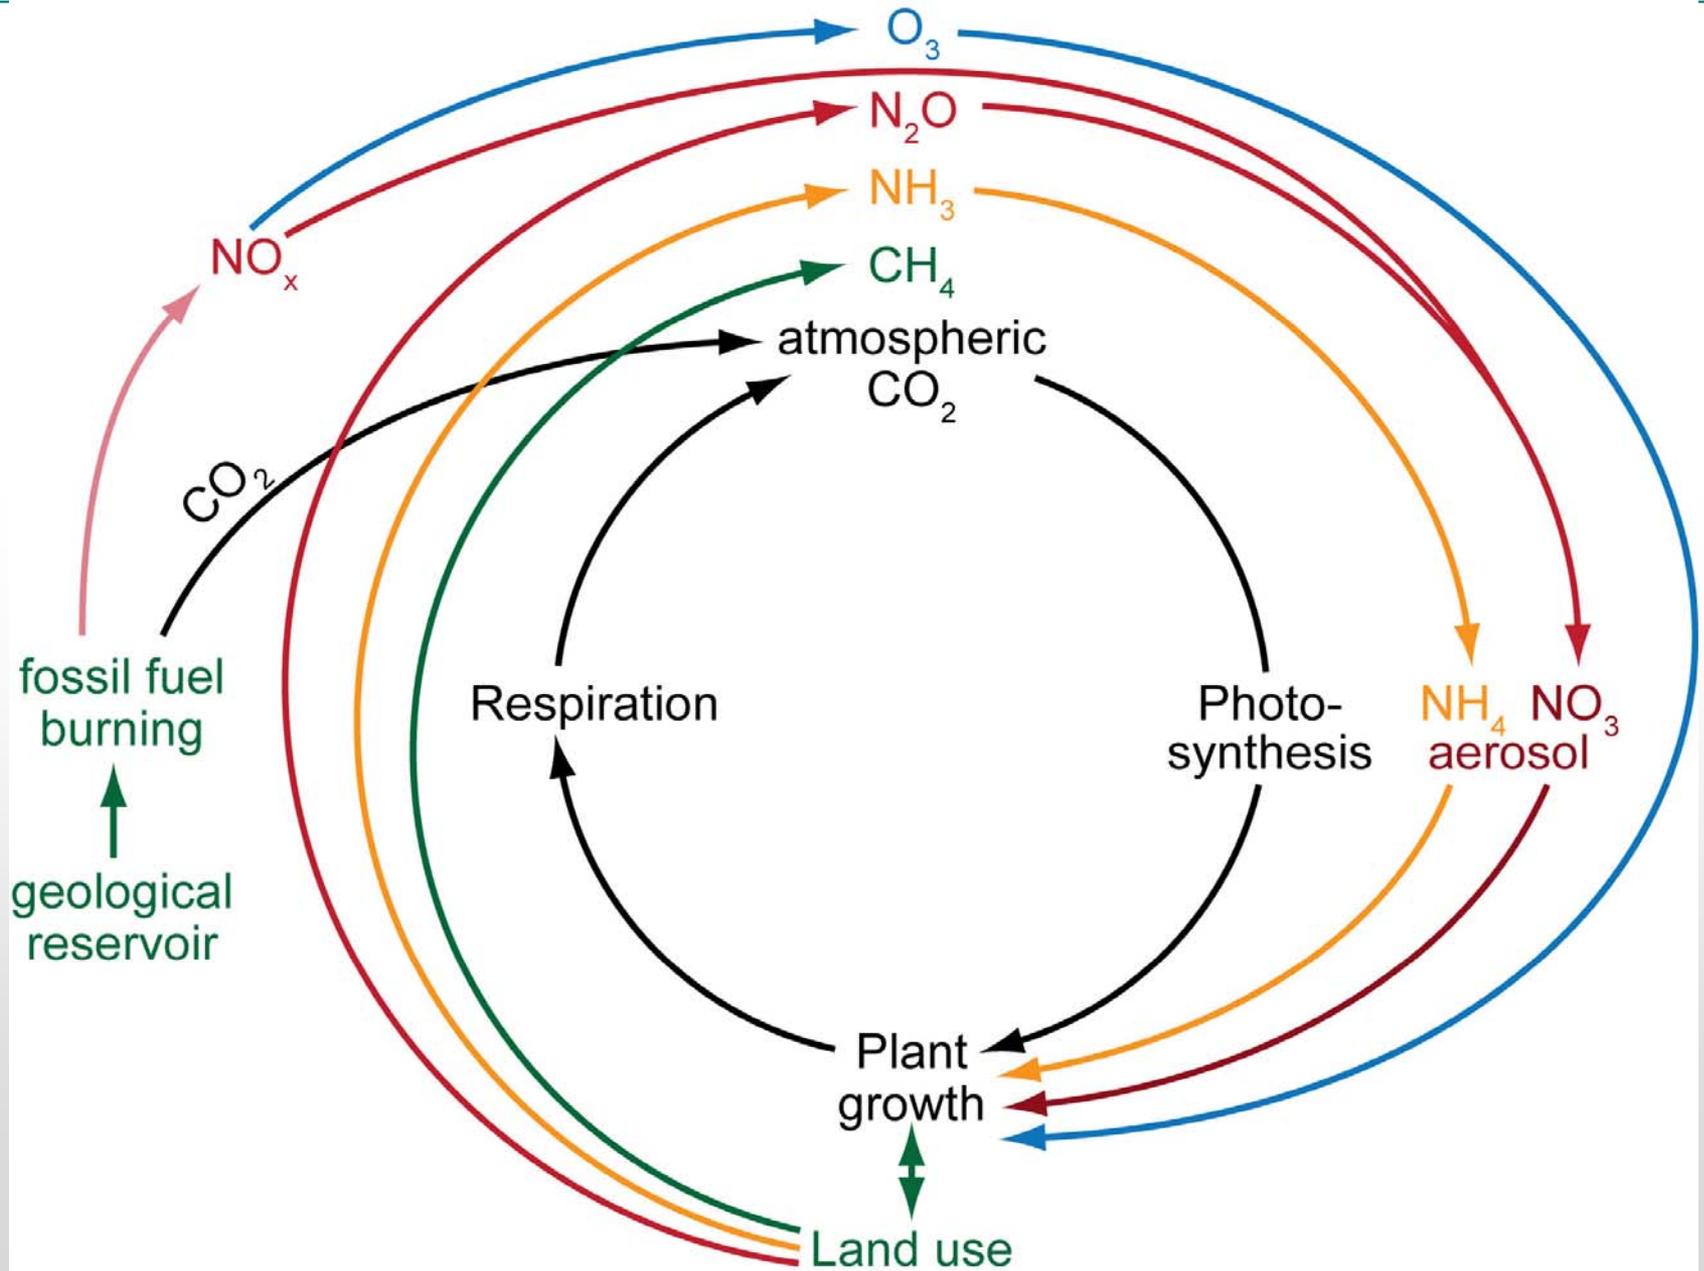

## **Definition of sustainability: Brundtland-Kommission for Environment and Development of the UN (1987):**

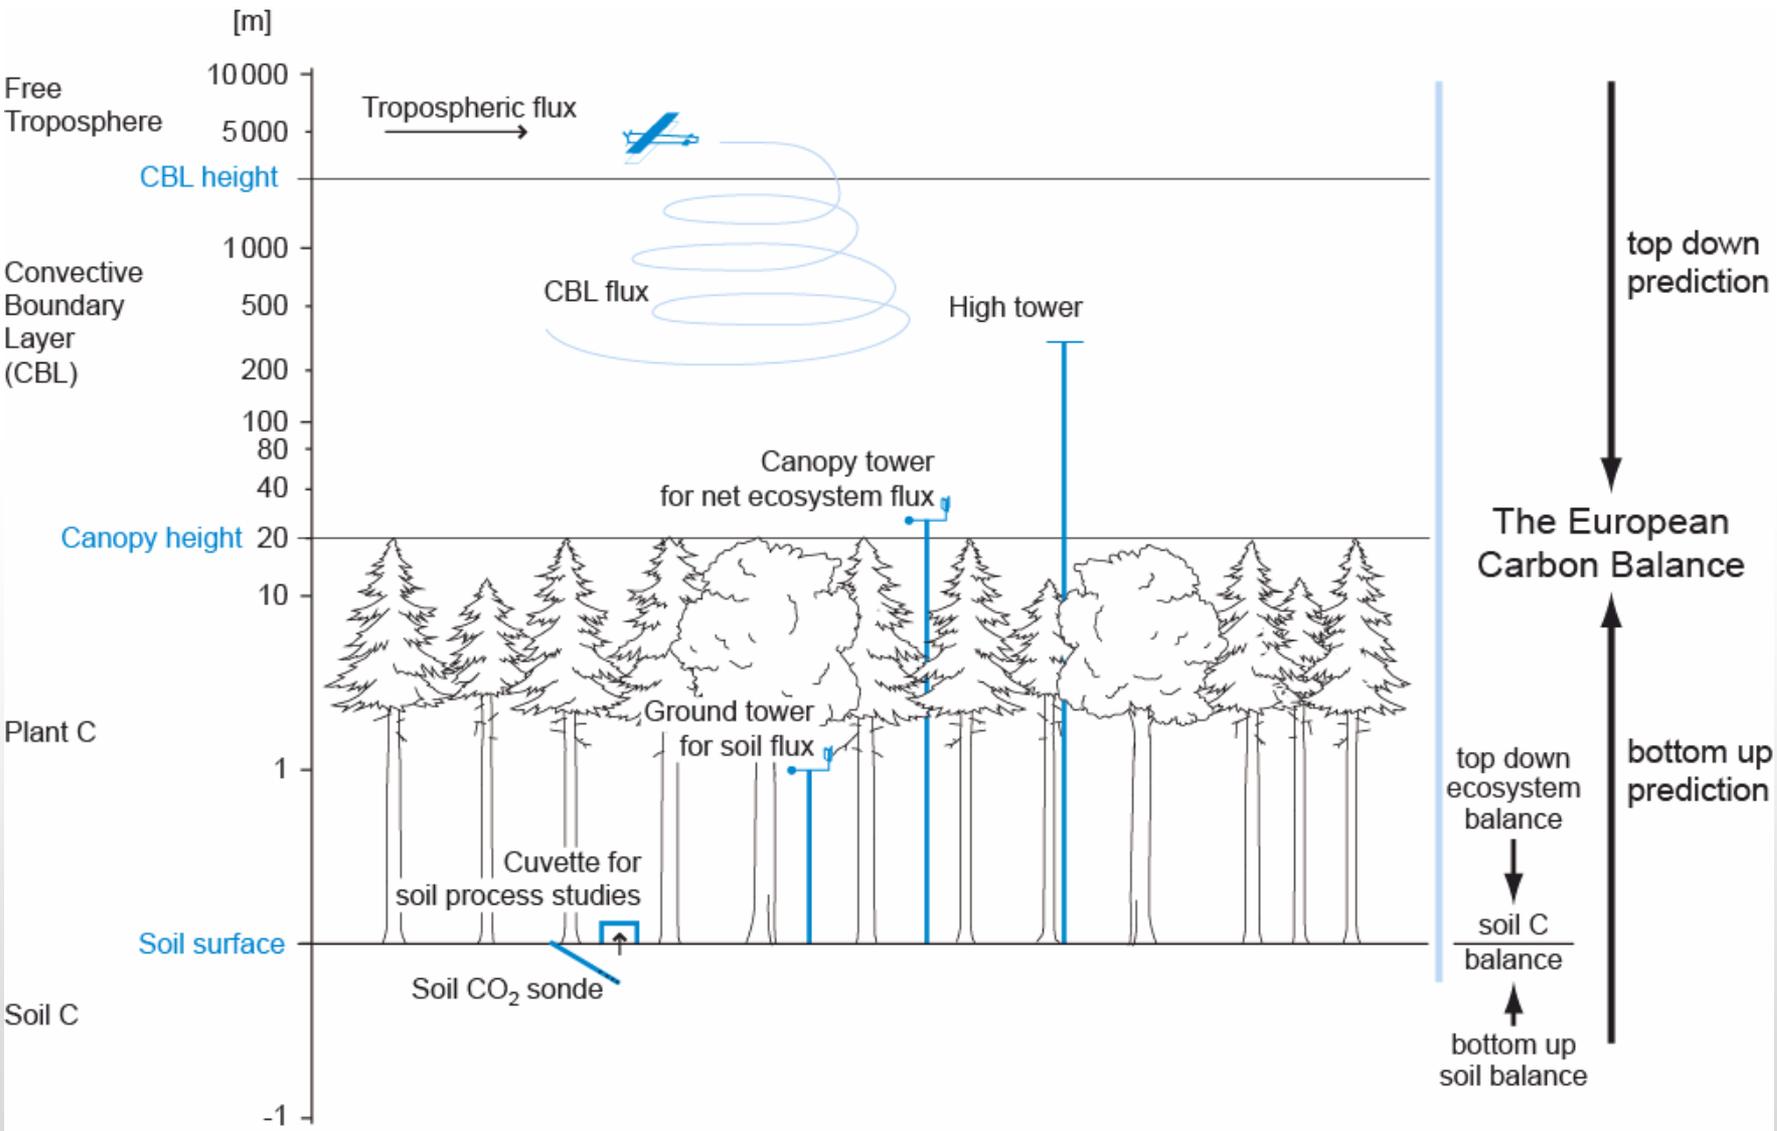

**„Development which satisfied the demands of the present Generation without compromising the chances of future generations“**

- **The greenhousegas balance of Europe**

## A simplified C cycle

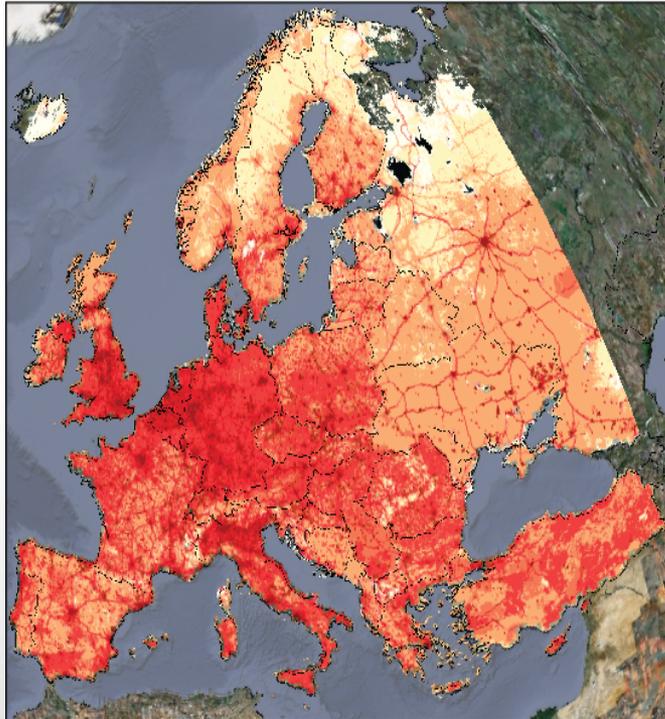

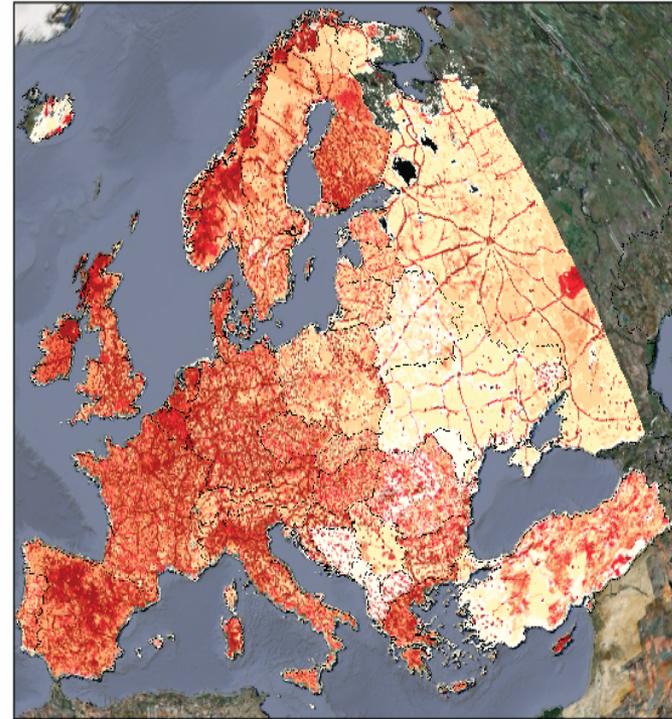

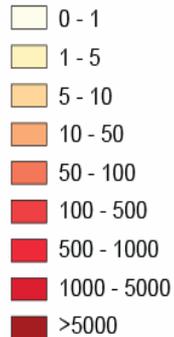

# Verification of the budgets ( $10^6 \text{ t y}^{-1}$ )

	EU-25	
	atmosphere-	land-based
<b>CO<sub>2</sub>-flux</b>	<b>-134 ± 303</b>	<b>-124 ± 54</b>
<b>CH<sub>4</sub>-flux</b>	<b>102 ± 40</b>	<b>60 ± 26</b>
<b>N<sub>2</sub>O-flux</b>	<b>58 ± 48</b>	<b>70 ± 35</b>
<b>NO<sub>x</sub>-flux</b>	<b>8 to 9</b>	<b>9 to 10</b>
<b>GHG-budget</b>	<b>26 ± 227</b>	<b>6 ± 52</b>

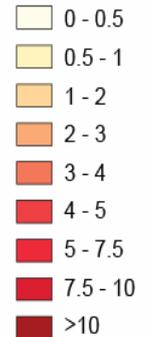

There is no verification for NH<sub>3</sub>, NO, wet deposition of N:  
 There is an urgent need for instrument development

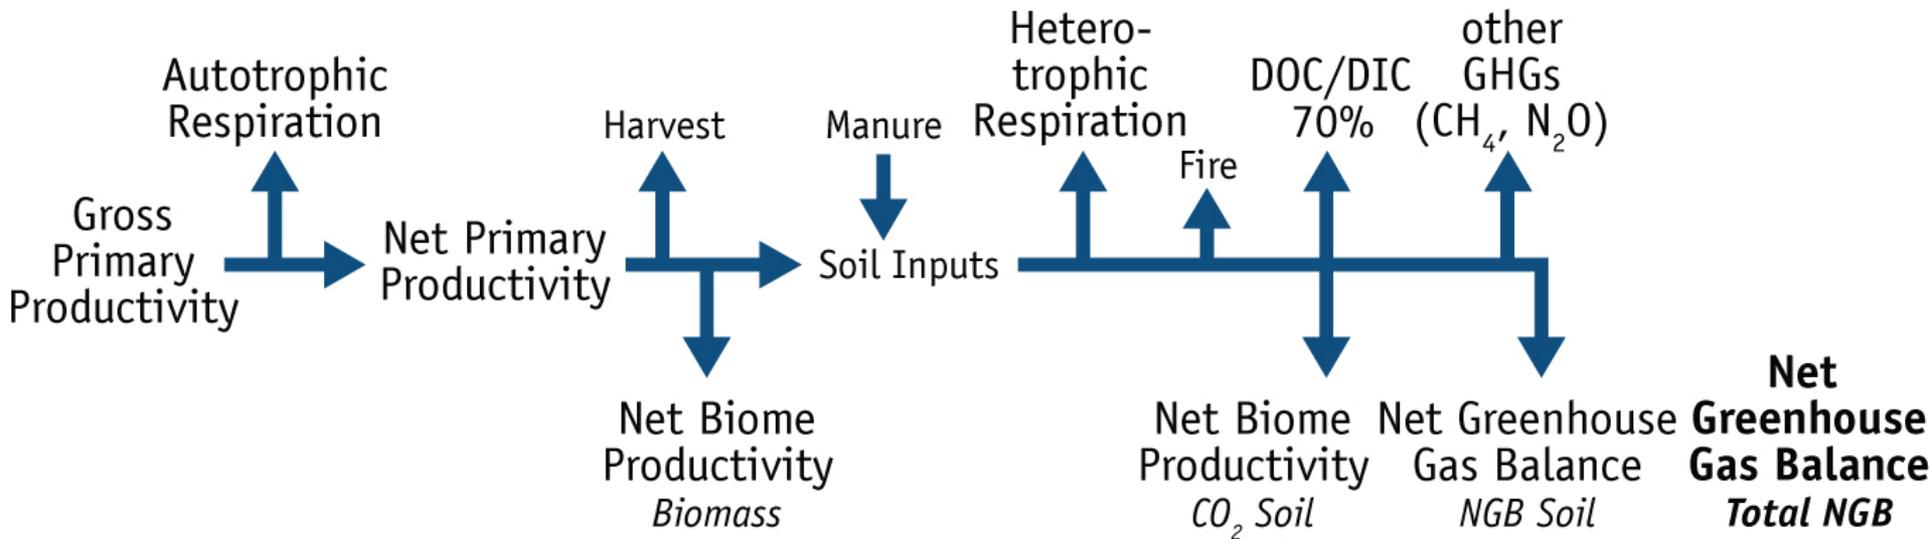

Fossil fuel emission  
of continental Europe  
[g CO<sub>2</sub> m<sup>-2</sup> yr<sup>-1</sup>]

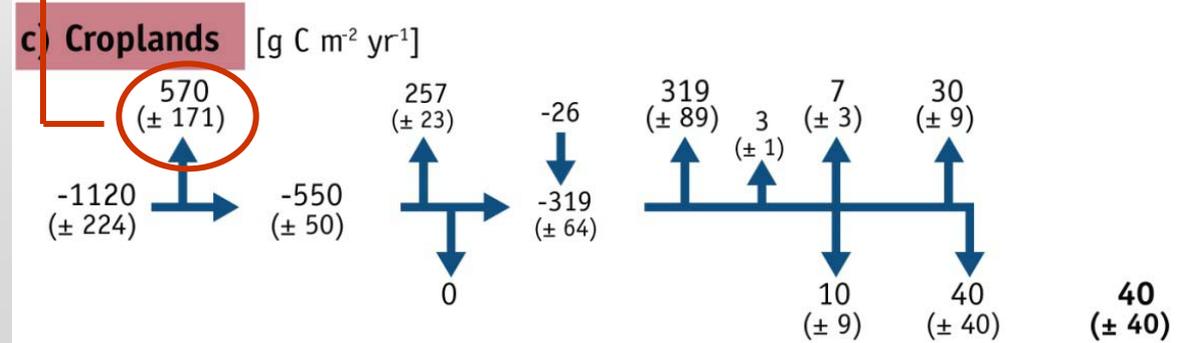

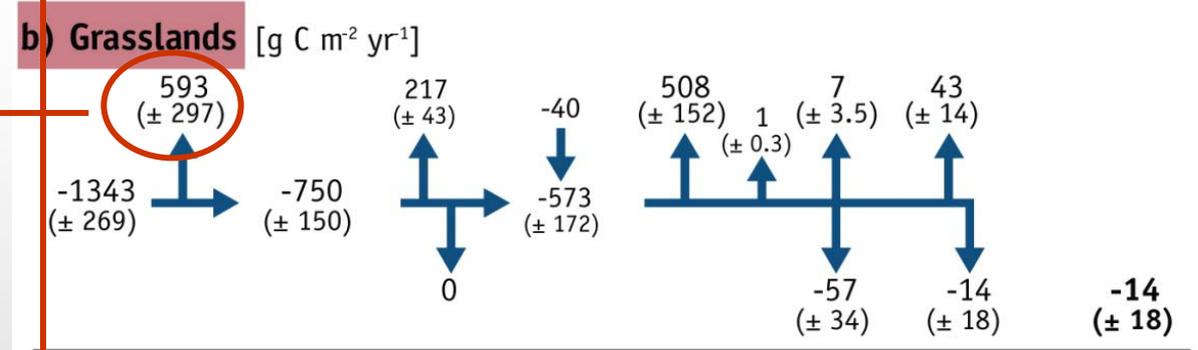

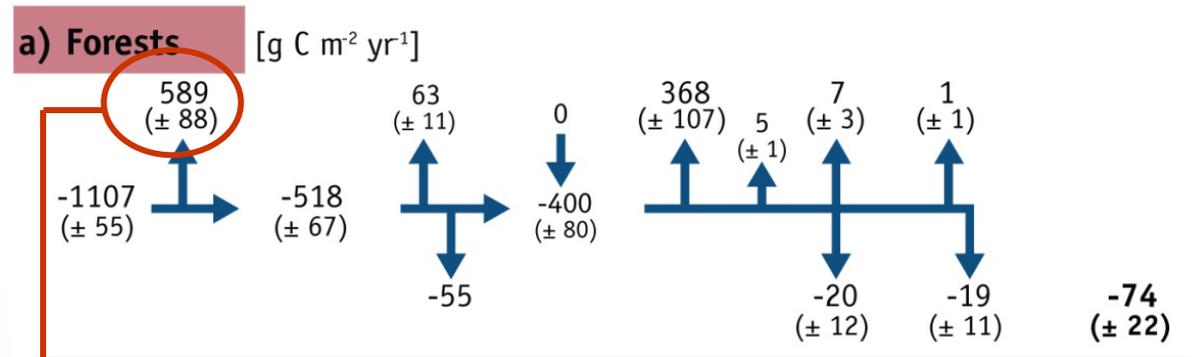

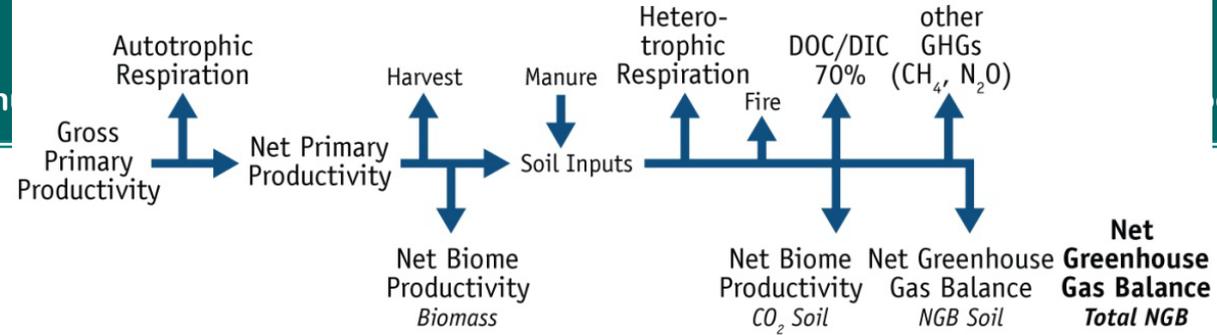

Fossil fuel emission  
per population  
[10<sup>6</sup> g CO<sub>2</sub> person<sup>-1</sup> yr<sup>-1</sup>]

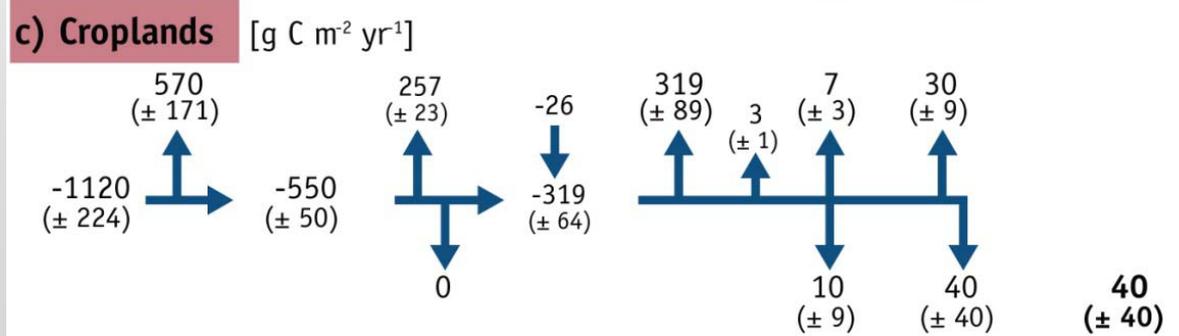

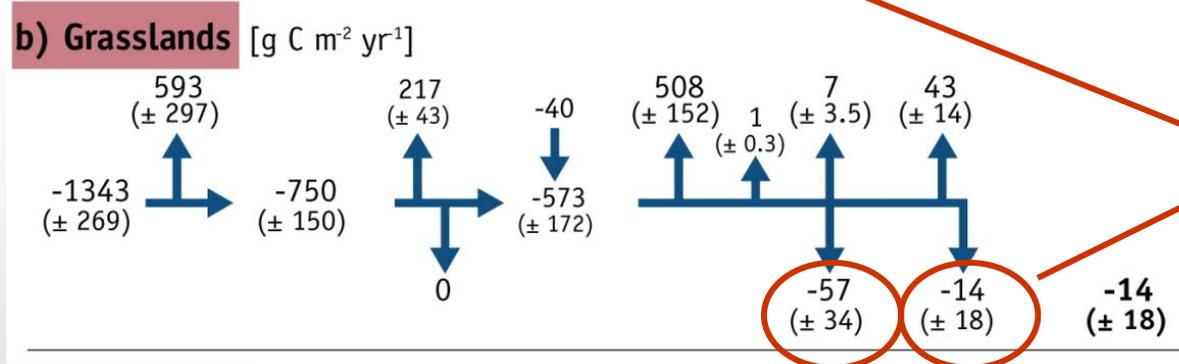

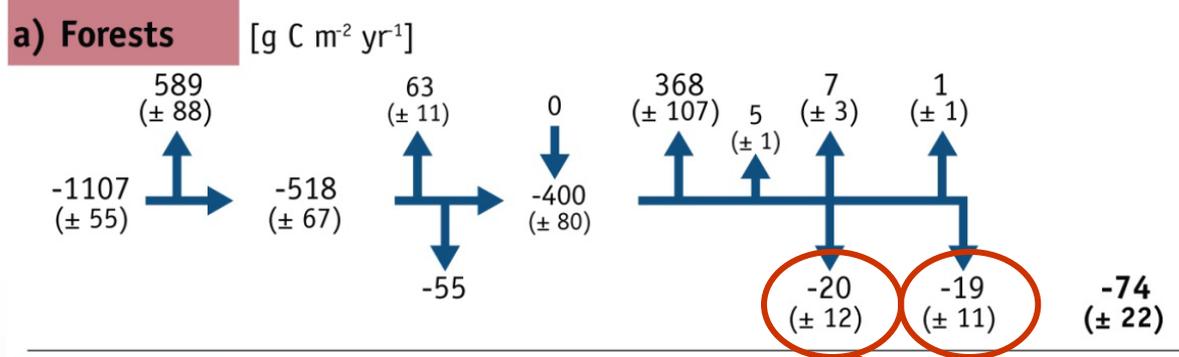

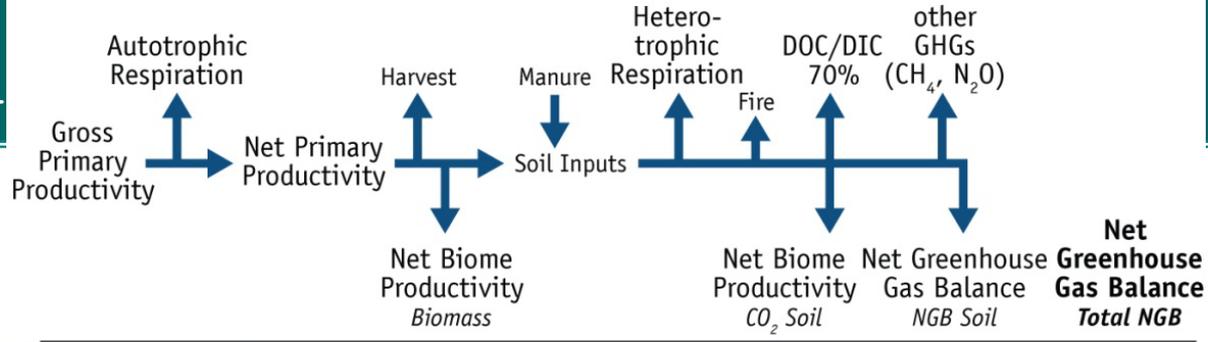

Schulze et al., 2010  
IER Stuttgart

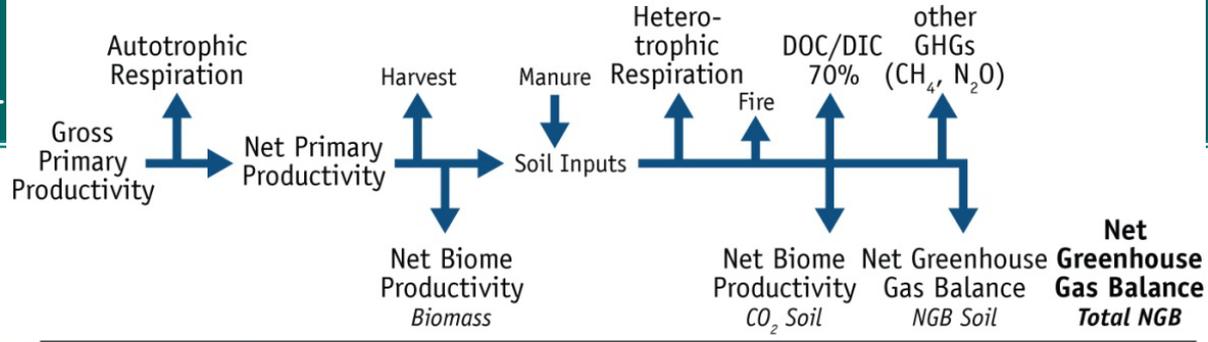

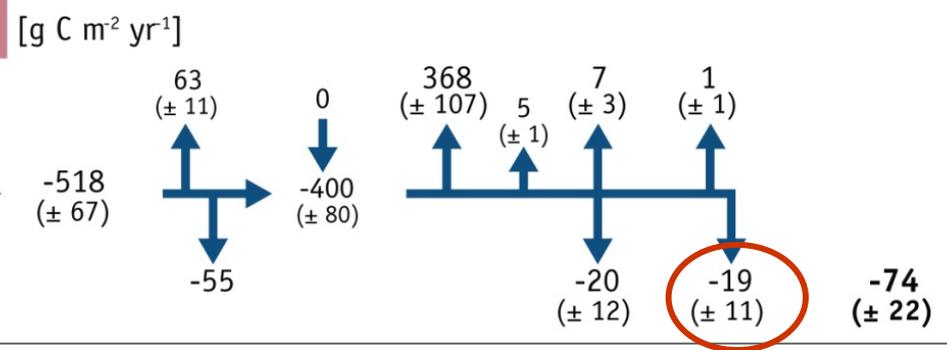

at canopy level GPP is very similar

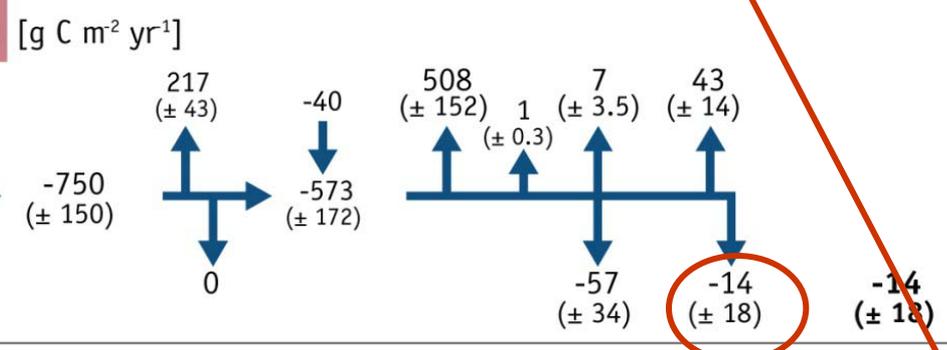

C: grass > forest  
GHG: grass < forest

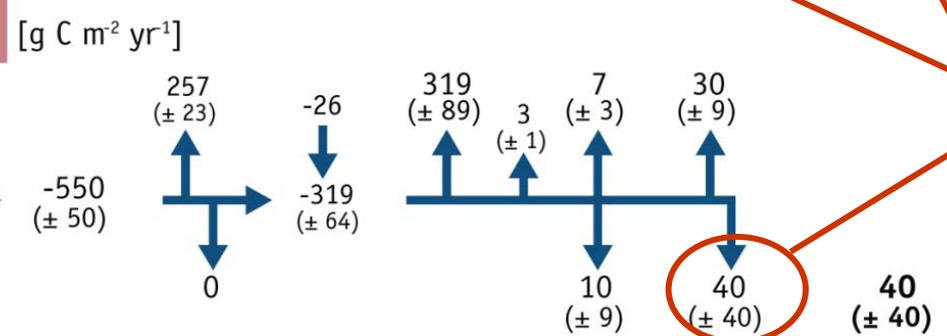

**a) Forests**

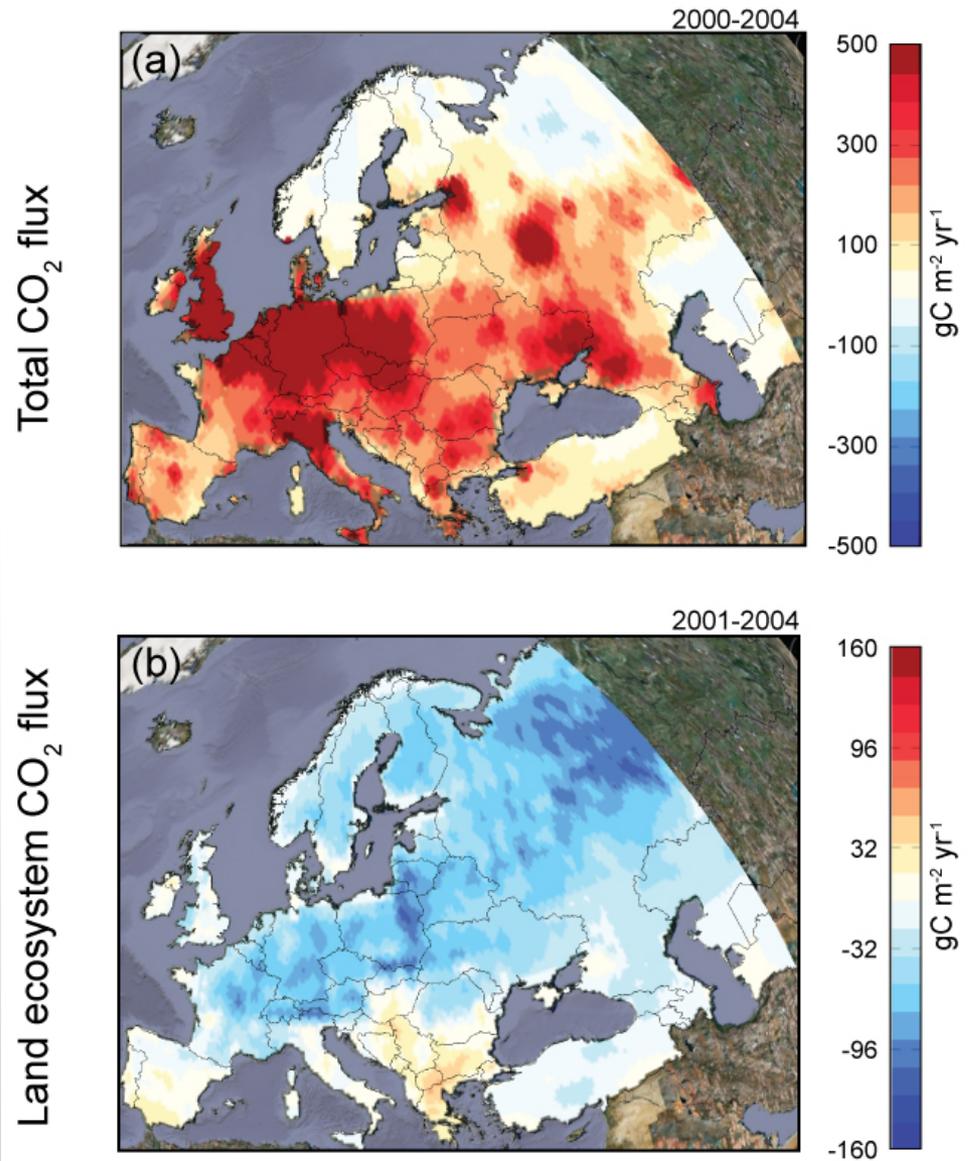

**b) Grasslands**

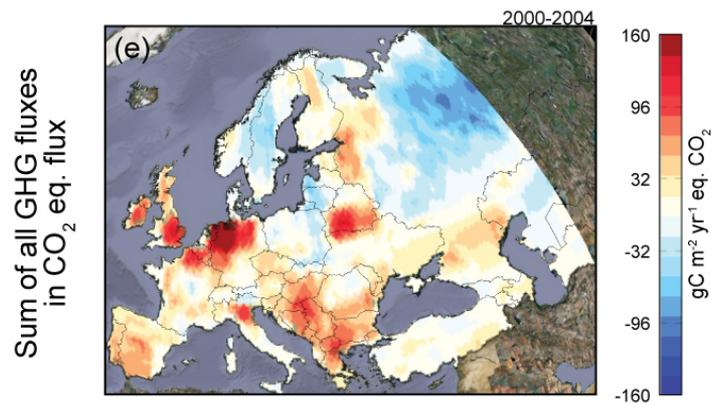

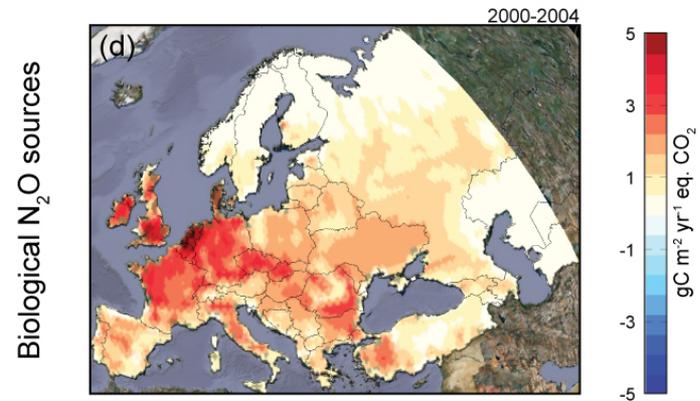

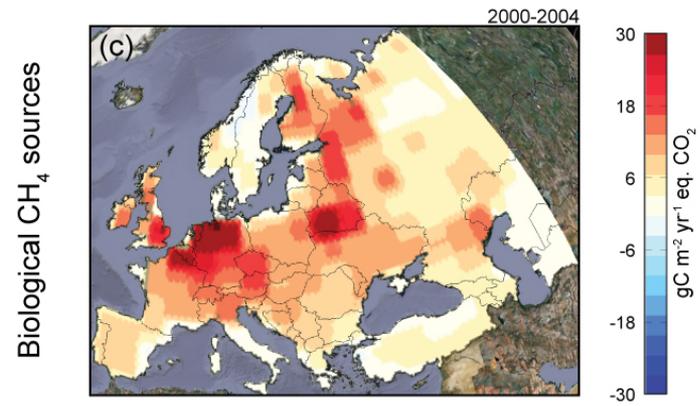

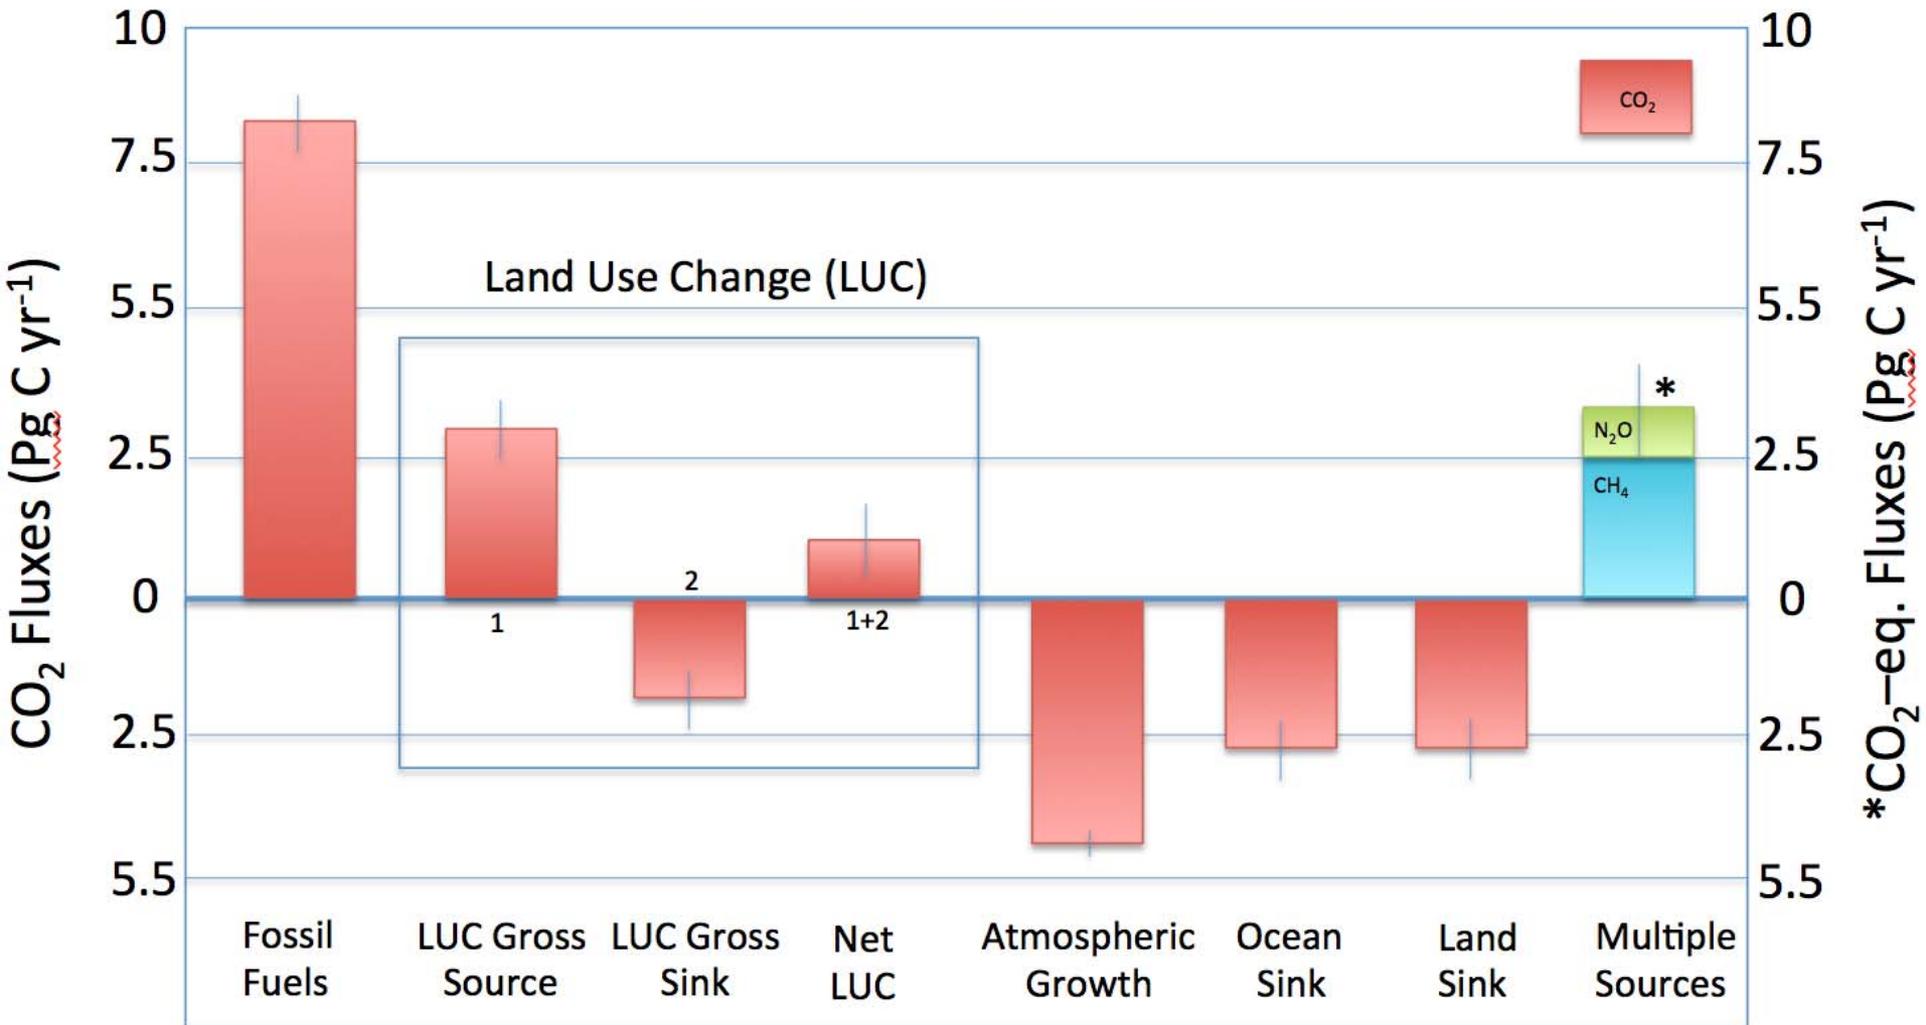

**c) Croplands**

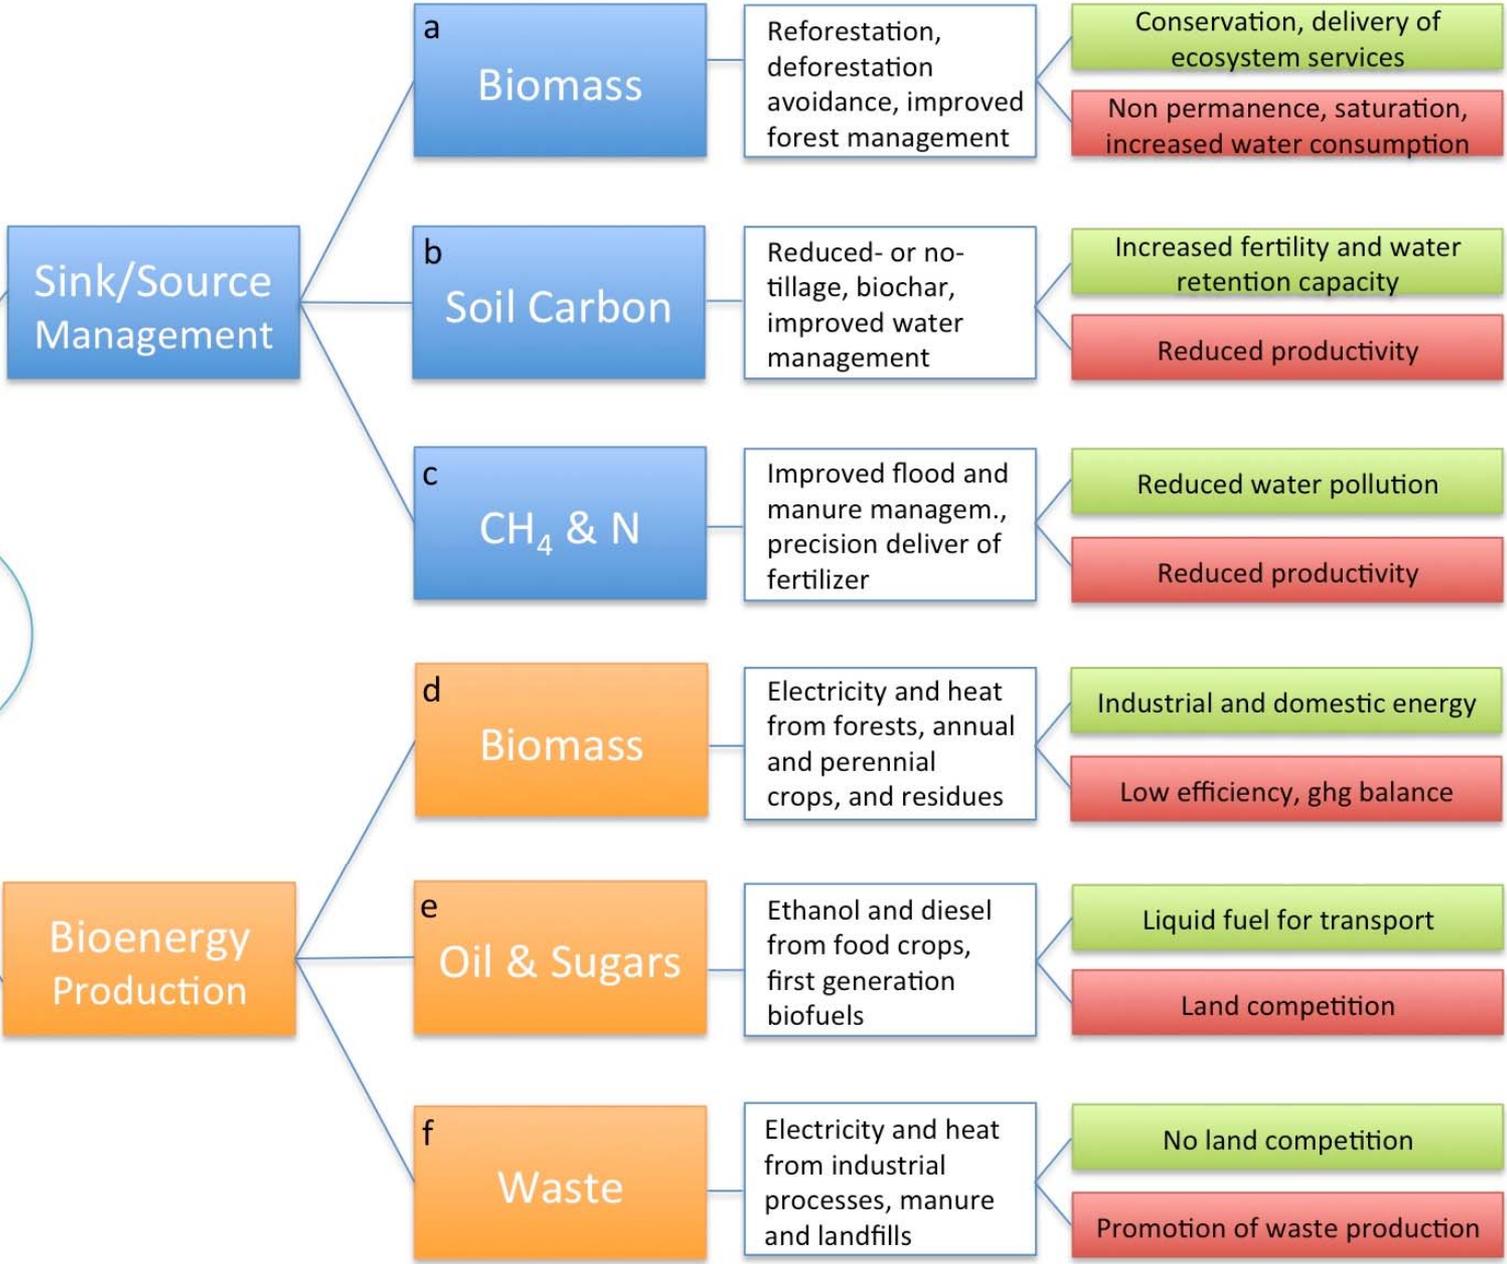

other GHG  
- cropland losses =  
grass + forest

# Climate Mitigation

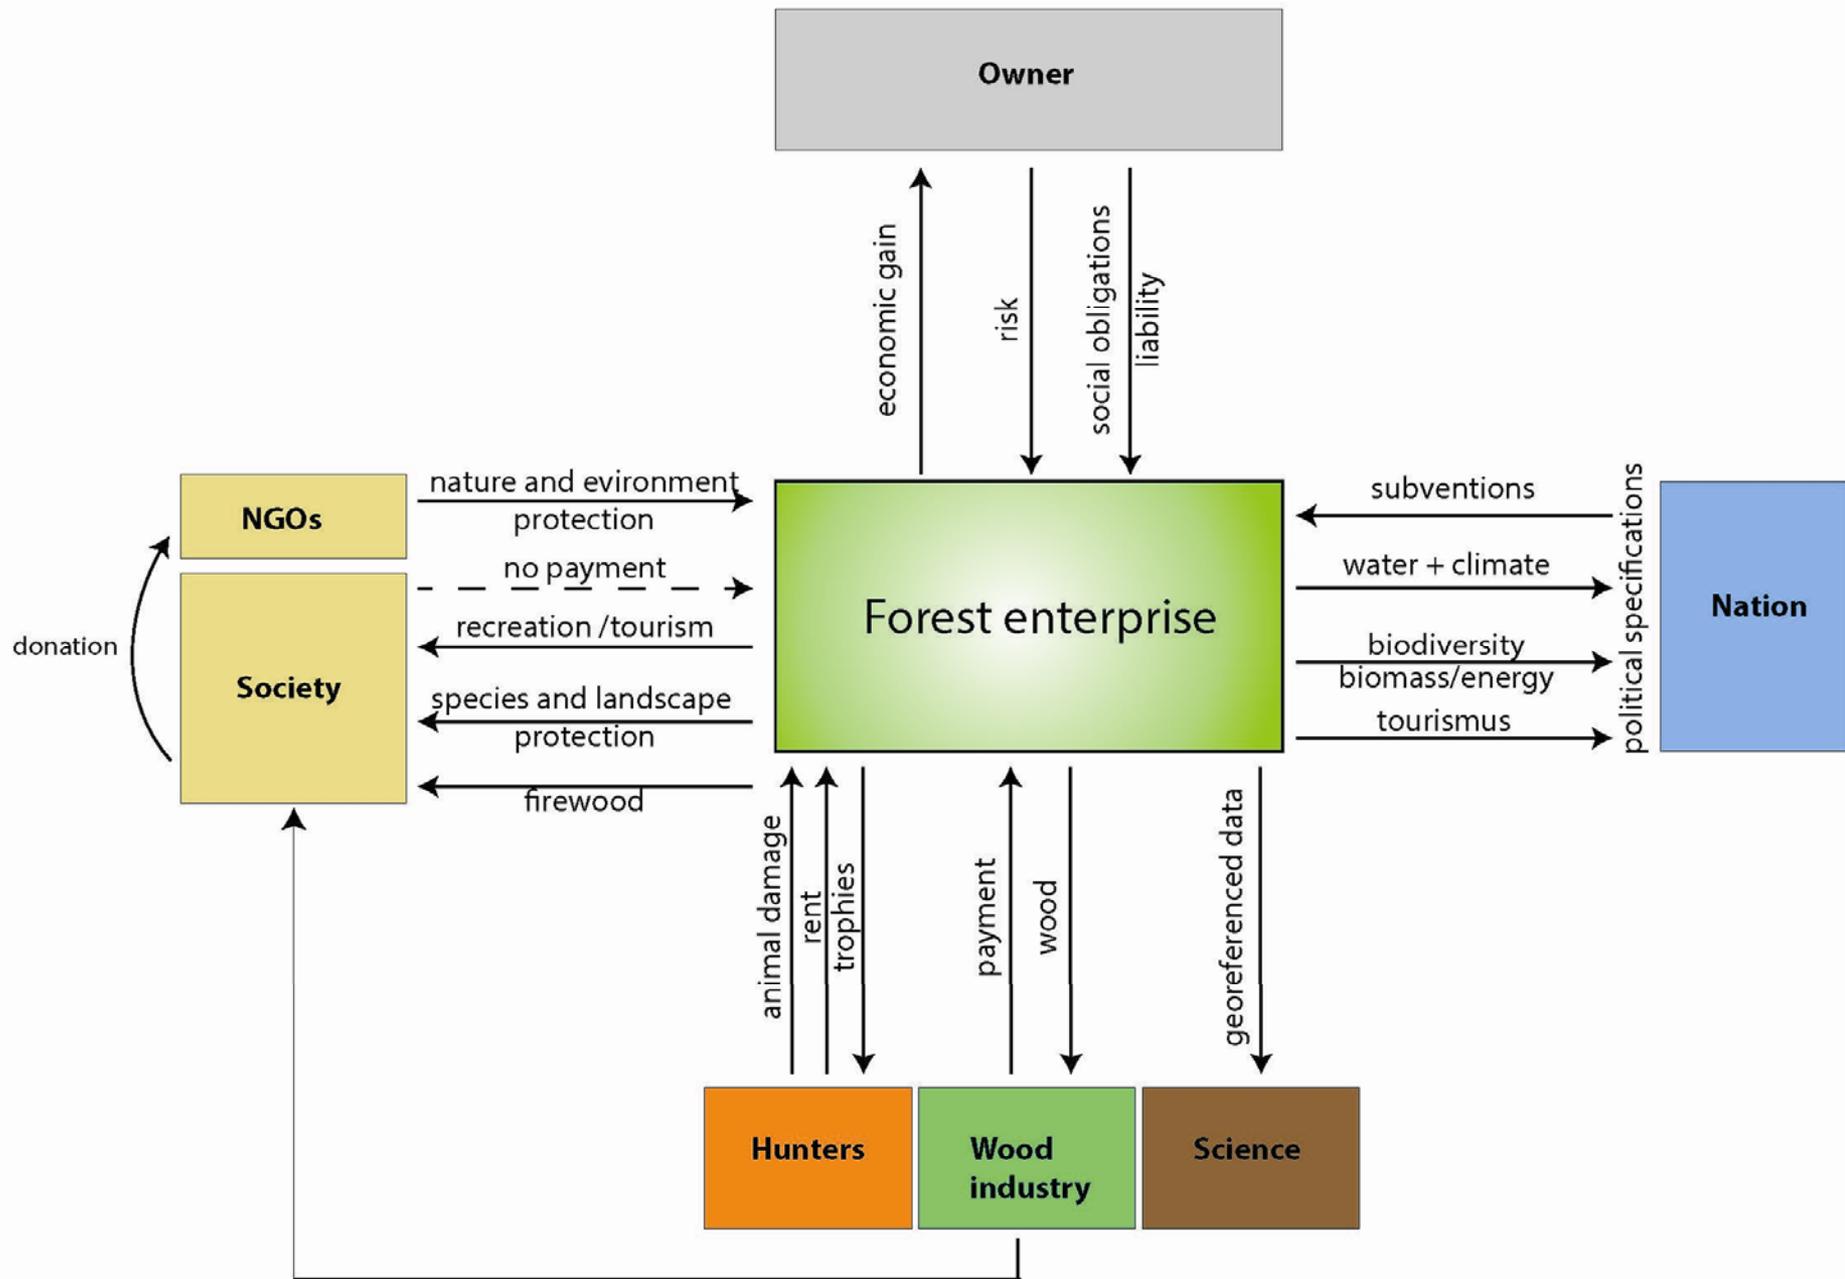

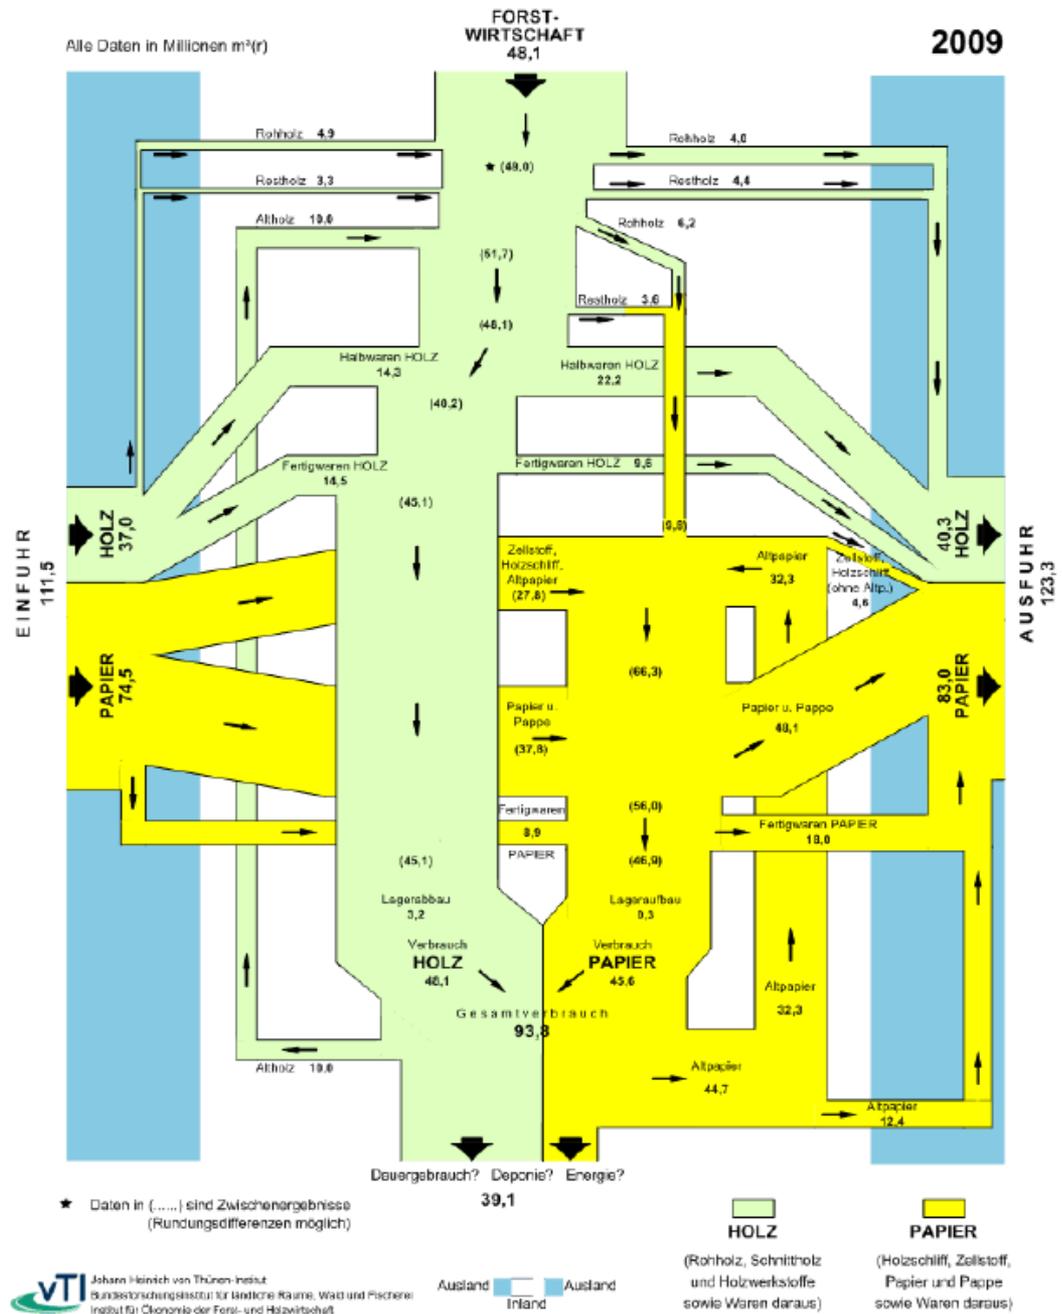

- **The situation in German Forestry**

21/05/2012 09:41

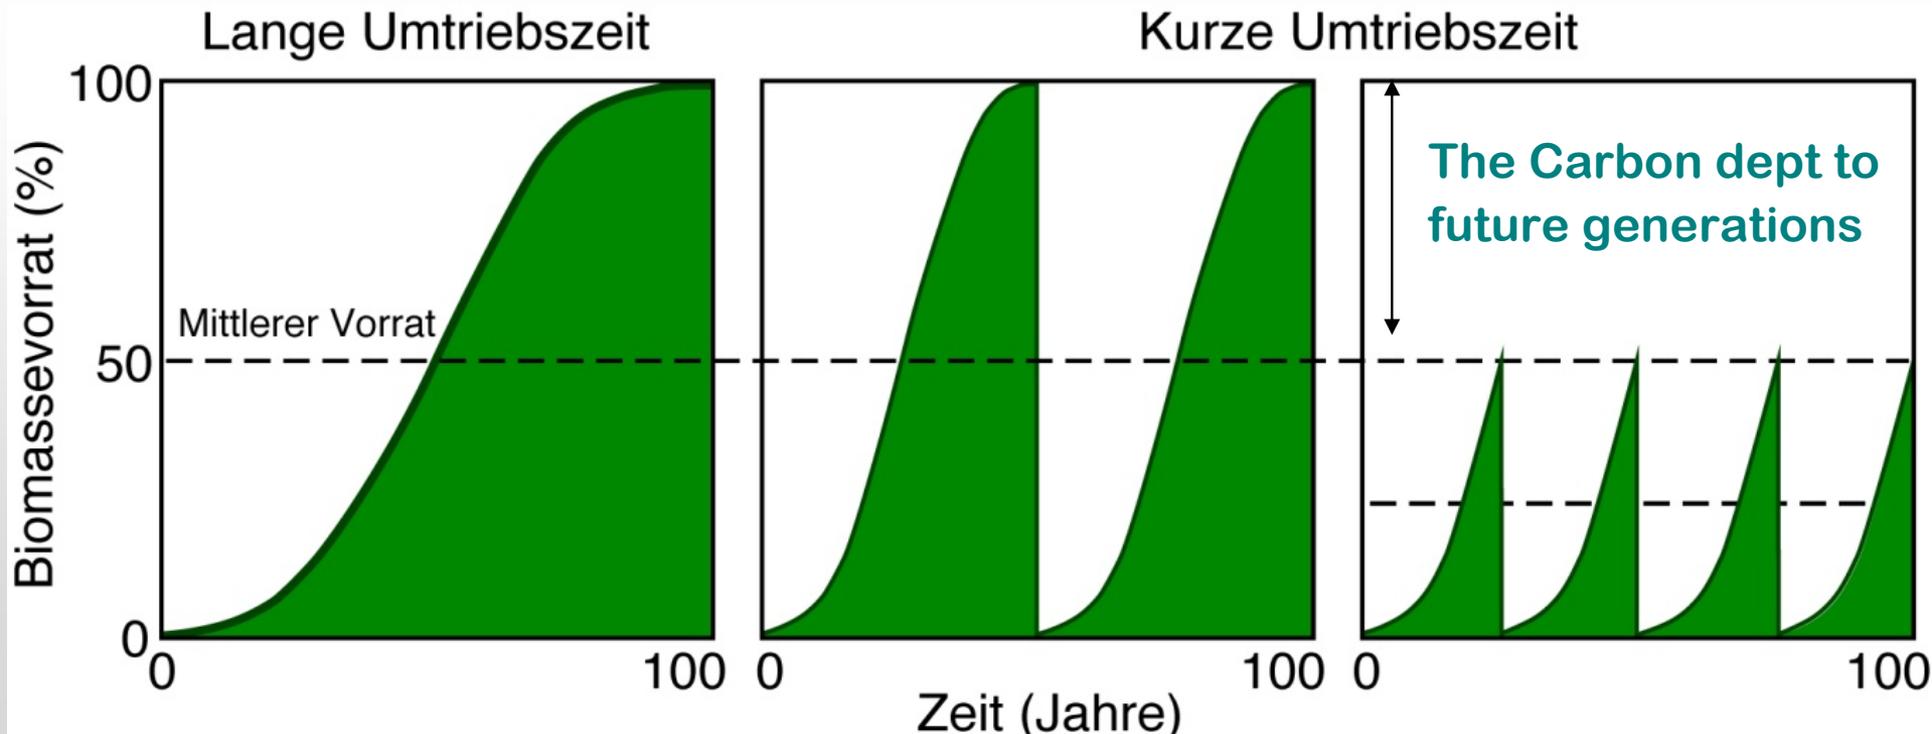

### Arguments for a reduced rotation:

- Risk of windthrow increases for age >60
- Wood industry demands Sapwood
- Prices maximise at 25 cm diameter
- Lower dimensions sold as bioenergy

### Arguments against reduced rotation

- No deadwood (Biodiv Hotspot)
- No old trees (Birds)
- Reduced recreation value
- 1 Mill m<sup>3</sup>: 5% of fossil fuel consumption
- Douglas fir unwanted by NGO's

<b>Number of tree species</b>	Central Europe	NE-America	NE-Asia
Broad leaved	55	203	733
Coniferous	8	33	94
Total	63	236	827

### Tertiary

Ple *P. macrocarpa*  
 Pli *P. premacrocarpa*  
 Mio *P. longifolia*  
 Mio *P. pseudotsugae*  
 Eoc *P. taxifolia*  
 Pal *P. miocena*

### Tertiary

PAH-4 (LRTAP)	3,0	2,7	0,025	g/tonn

<sup>1</sup> Dette brukes her synonymt med tradisjonelle vedfyrte lukkede ildsteder.

<sup>2</sup> Dette brukes her synonymt med rentbrennende vedfyrte lukkede ildsteder

<sup>3</sup> Faktoren er egentlig for rentbrennende oven

We pay twice:

1. The subvention for renewable energy
2. The heating cost for Hartz IV

- **Wood is renewable but not unlimitedly available**
- **Increased environmental concern of people:**
  - „people“ pay extra for „green“ electricity,
  - „people“ use wood for construction (mainly conifer), and
  - „people“ heat with logs
  - „people“ object against new species.
- **At the same time people demand**
  - More area for recreation,
  - More area for Nature Conservation,
  - More deciduous forest
  - More deadwood.
- **In reality the desire for living environmentally friendly leads to an increased use of forest products and to a limitation of its supply.**
- **The „green“ life-style contradicts the additional demands for maintaining diversity and personal recreation in forests**
- **Pierre Vergniaud: „The Energytransition is like Saturn, it eats its own children“**

- **The situation in agriculture**

# Accounting of Land use according to Artikel 3.4 (December 2006):

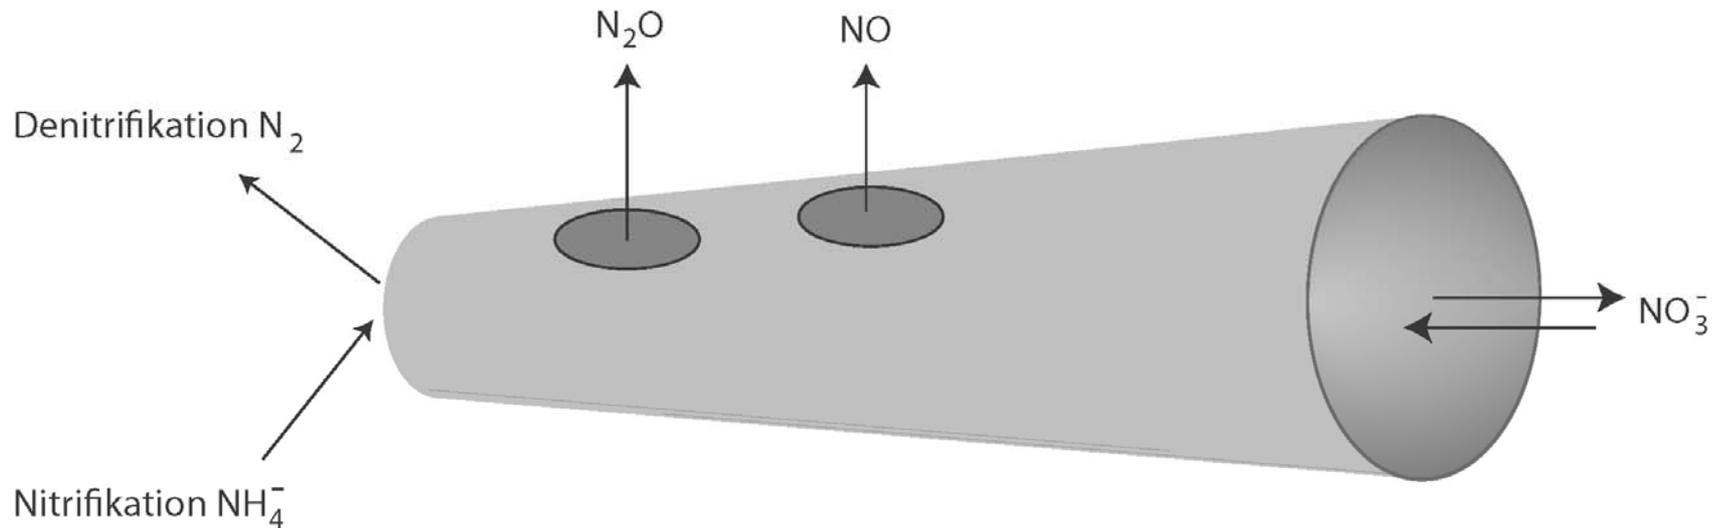

**Table 13 EU-15 Member States of elections of activities under Article 3, paragraph 4**

Member State	Forest management	Cropland management	Grazing-land management
Austria	Not elected	Not elected	Not elected
Belgium	Not elected	Not elected	Not elected
Denmark	Elected	Elected	Elected
Finland	Elected	Not elected	Not elected
France	Elected	Not elected	Not elected
<b>Germany</b>	<b>Elected</b>	<b>Not elected</b>	<b>Not elected</b>
Greece *)	Not decided	Not decided	Not decided
Ireland	Not elected	Not elected	Not elected
Italy	Elected	Not elected	Not elected
Luxembourg	Not elected	Not elected	Not elected
Netherlands	Not elected	Not elected	Not elected
Portugal	Elected	Elected	Elected
Spain	Elected	Elected	Not elected
Sweden	Elected	Not elected	Not elected
United Kingdom	Elected	Not elected	Not elected

**Note:** \*) At the time of publishing this report, the election of activities under Article 3(4) was not decided.

**Rapdiesel fails the Sustainability Test of the EU: Nature, 9. August 2012**

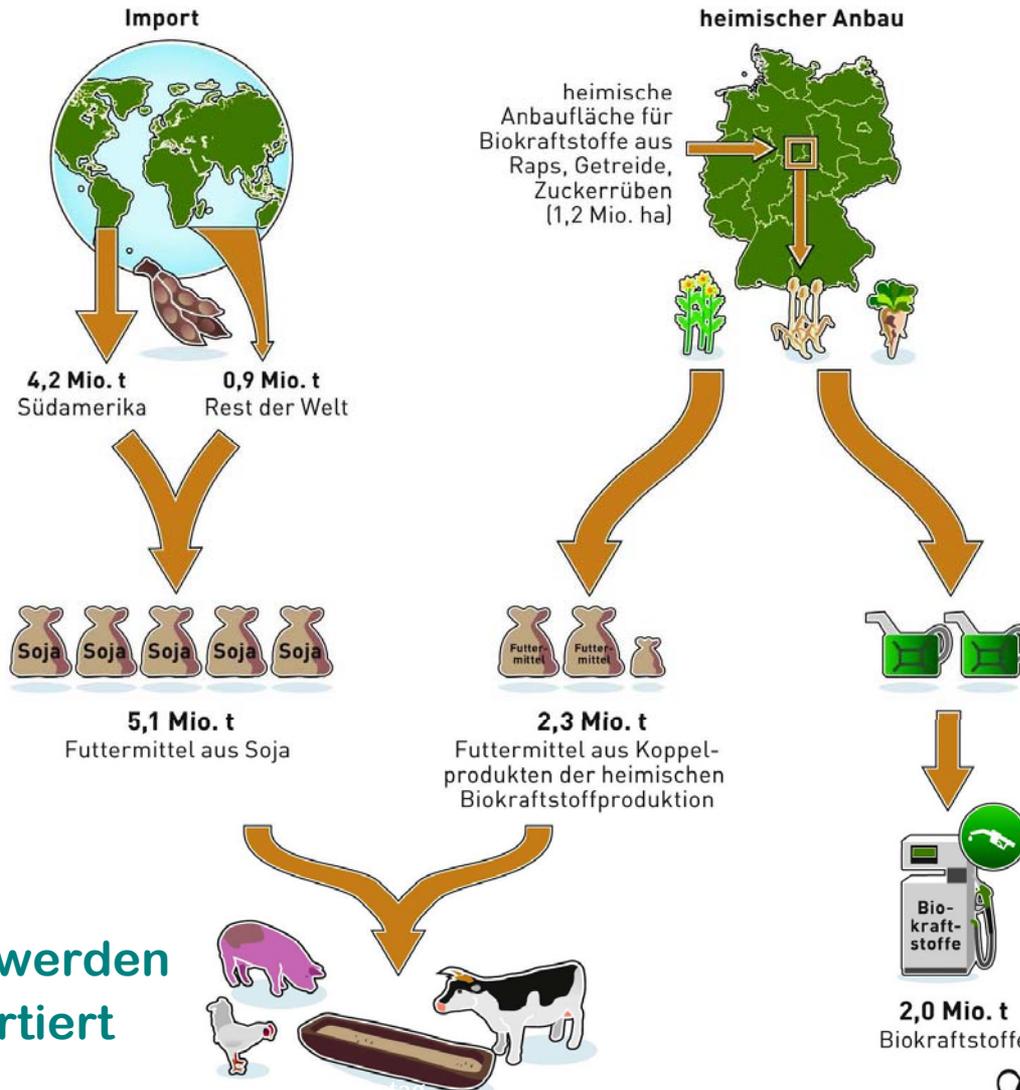

**2 to 7% of the organic and inorganic fertilizer-N  
are emitted as N<sub>2</sub>O (the EU default value is 1%)**

- Agriculture causes**
  - 50% of European CH<sub>4</sub>,**
  - 70% of European N<sub>2</sub>O**
  - 90% of European NH<sub>3</sub>**
  - 75% of the Global Warming Potentials of GHGs originates from agriculture**
  
- Biological Emissionen are 30% of the GHG balance**

No accounting of GHG's, since agriculture serves the food supply  
(Common Agricultural Practice der EU: CAP)

## Heimische Biokraftstoffe vermeiden Sojaimporte nach Deutschland

Ohne Koppelprodukte aus heimischer Biokraftstoffproduktion müsste Deutschland fast 50 % mehr Soja-Futtermittel importieren.

# 2009 Major Pellet Trade Flows

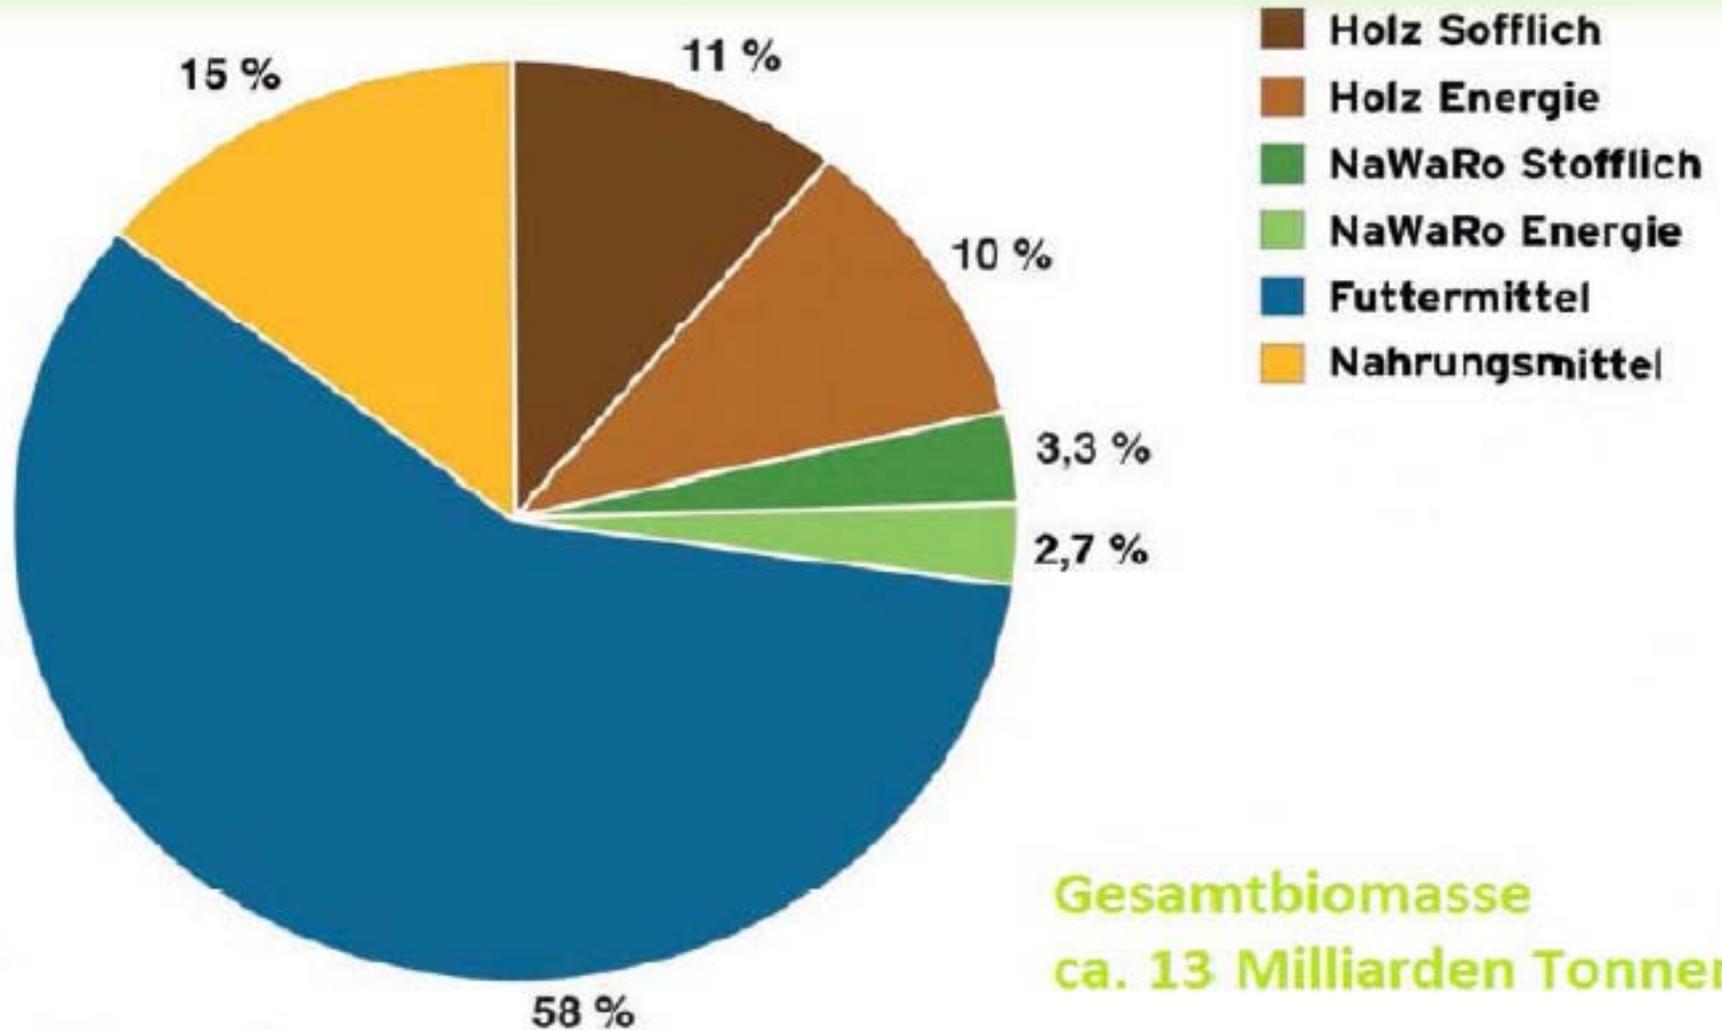

Biodiesel

Ethanol

IPCC, 2012

## • Conclusions

- Mankind has reached a limit where natural ecosystems collapse (at least locally)
- 4 to 6°C global temperature rise will make large areas inhabitable by 2050
- Bioenergy from agriculture enhances this trend
- **There are few options for Mitigation**
  - Save Energy (Shut down advertisement)
  - Emitters must pay
  - Reduce Milk and Meat-consumption (unrealistic)
  - Reduce trade of Biomass (unrealistic)
  - Develop new technologies to split water

**Thanks**
